# Laws For Awakening Humanity

Simon Bialobroda © 2023

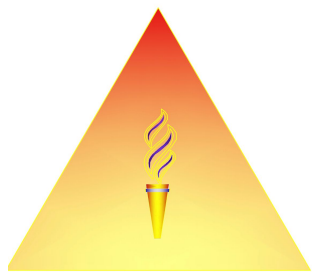

The author believes:

- What is important is the consciousness we create as a group and individually within ourselves.
- Excellent educational tools are those that promote discovery, creativity, imagination, cooperation and empathy.
- Expressing the best of human qualities and spreading them in the world drives us to evolve and improve.
- Teachings of enlightenment are never complete. They are a particular reflection in time and space of the Universal.
- Enlightenment teachings have value if they show the way to the experience of the truth of Being and Reality and are embodied.
- Consciousness wisely focussed towards constructive achievement brings balance and love into the world.

MISSIVES FROM SPIRITUAL ELDERS	25
LIST OF HIGHER LAWS AND LAWS OF SOUL LIFE	30
LAWS 1-35	33—148

end notes

## MISSIVES FROM SPIRITUAL ELDERS<sup>1</sup>

The following missives are from several of the Christ's, Senior Disciples. The first, from one of the Masters of Wisdom, sketches out what the universal laws are and the spiritual milieu in which the laws for awakening humanity will develop. The seven missives that follow describe the necessity for the laws, expressions of divine order and their sponsorship as the Coming One for Whom the world waits approaches. Love of truth, justice, shared responsibility and cooperation, will enhance humanity's ability to act in the world and enhance the ability of the spiritual hierarchy to contribute to the world —a profound, practical and useful strategy for creating a pathway to the sacred and divine.

*1-“The Universal Laws are higher manifested expressions of the One Superior Intelligence that is the Creator of all life and are applied in the Cosmos, as well as, on earth. These Laws are simply the modes of expression that govern the spiritual operation within God’s divine creation and keep the mechanisms of this universe working in divine order, maintaining total unification. In doing so, the Laws express the Will of God and lead to the manifestation of divine Purpose throughout His many universes. These Laws, supporting constancy since the beginning of all creation, ordain and nurture the Divine Plan and responsibly work in cooperation with one another to sustain harmony among all universal existences. This is called divine Wisdom operated by divine Love.*

*The Universal Laws are life impulses that provide a way of existence or activity, for all universes operate within a divine*

geometrical, mathematical and scientific perfection based on spiritual laws and principles. *In fact, since the beginning of its creation the earth has been governed by the long array of Universal Laws just as other planetary bodies and star systems have. Scientists have been able to attain only a partial understanding of these Laws in the past because their understanding has been based solely on scientific theory which excluded the primal spiritual Divine Source, namely the acknowledgement of the Creator's involvement. This can be seen, for instance, in the example of the 'Big Bang' theory. With or without belief in God's divine system, the Laws are accurate and perfect and allow for no deviation. There is neither avoiding nor denying them for the Laws will always govern and control all that happens in time and space; thus no abnormalities can ever deter the functioning of this system.*

*A new divine order of creation is beginning to appear on the horizon, which will give humanity new hope and the potential of raising the human expression into pure joy, brotherly love, and harmony. These Laws will be the necessary tools by which humanity can be propelled into a higher vibratory level of existence and become soul-infused personalities in the future.*

*In order to integrate fully the concepts of spiritual initiation, or evolution in consciousness, the individual must come to a greater understanding of these spiritual Laws and apply them now in this present day. To reclaim one's power, spiritual and otherwise, and bring peace and balance into one's life, the individual must choose to live righteously in accordance with these Laws. By incorporating the Laws into daily life, meditation, and healing practice, humanity will*

*eventually witness an unfoldment of greater serenity, intelligence and wisdom. Until now most of the human race has had little experience in understanding their lives in terms of the Universal Laws, and unfortunately, because of their resistance to these Laws, or the lack of conscious knowledge thereof, their lives have resulted in painful self-infliction and suffering.*

*The Universal Laws are occult and basic, scientific and superior, and are the underlying foundation for the gifts of mastery here on earth. All the Great Ones within the planetary Spiritual Hierarchy and of the Cosmos adhere obediently to these Laws by the use of Their own free will because They understand that the Laws are the backbone of the Ancient Wisdom and the One Intelligent Life.*

*Today there are spiritual aspirants and disciples who are also choosing by their own free will to follow the spiral of higher evolution and are implementing these Laws effectively and creatively to the best of their ability. These spiritually awakened ones, in turn, will be the pioneers who will show others how to live a new dimensional existence in the coming new era; for Universal Law is not only one of the fundamental ideals that will govern the New Age, but is truly a gateway to a higher dimensional consciousness and a pathway to understanding cosmic intelligence.” - Master M*

*2-“At the center of the Universe is the generation point of all energy. As we are conscious in the center of our being, so we are. From this Source of Central Force all the Laws of the Universe become manifest.” - Master KH*

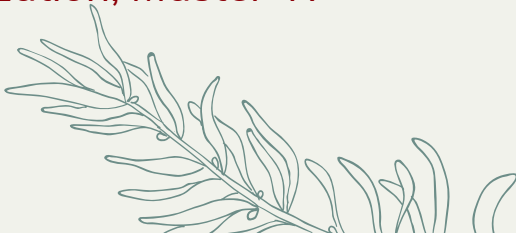

3-*"The higher knowledge will be found in the divine wisdom which is nothing less than an investigation of the Universal Laws."* - the Master KH

4-*"Universal Law is not only one of the fundamental ideals that will govern the New Age, but is truly a gateway to a higher dimensional consciousness and a pathway to understanding cosmic intelligence."* - Master M

5-*"The Universal Laws and rules are like the magnetic impulse that drives all back to the one emanating Divine Source. They bring order and balance out of chaos, and alas structure, in the universe. The Universal Laws are also the backbone to the new education, spirituality, culture and civilization in the coming new era, the sciences in general and to future extra-planetary relationships in which the earth and humanity is moving toward."* - Master A

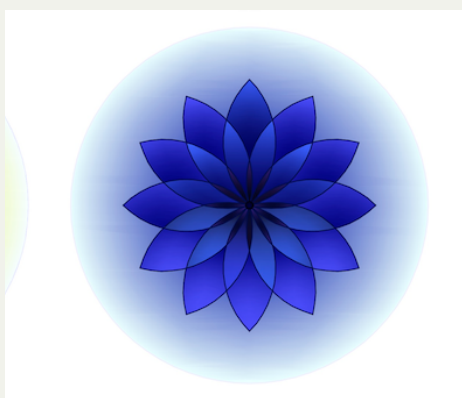

"6-*The new civilization is not a set of forms...It will emerge from your transformational consciousness...At that point you cannot help but build a new civilization. It will take forms as yet undreamed of by you...very possible to the consciousness you are moving into. The greater laws...work for that one who has demonstrated to his own being and to God that he is responsible; the he is one with the whole, not in sacrifice but in fulfillment and that he can accept creative freedom. It is not a goal of life to be able to manifest things. The goal is the ability to be, to love where one is, with whom one is and what one is, because one is and can see the magic of that being. God in the New Age offers you a freedom...that must express itself in such a way that the Whole is uplifted."* -the Lord of Civilization, Master R

*7-"The Law of Balance will be found at the heart of the matter, along with other elements and facts. So, even though it appears I speak often from the angle of science, which is sacred in itself, one must always keep in mind that Love is the germinating seed for all laws in the universe, and the place from where the consciousness and the heart of man evolve into divinity. " - Master A*

*8-"The Intermediate Law of Karma.—There is also an intermediate law, which is the synthetic law of the system of Sirius. This law is called by the generic term, the Law of Karma, and really predicates the effect the Sirian system has on our solar system. Each of the two systems, as regards its internal economy, is independent in time and space, or (in other words), in manifestation. We have practically no effect on our parent system, the reflex action is so slight as to be negligible, but very definite effects are felt in our system through causes arising in Sirius. These causes, when experienced as effects, are called by us the Law of Karma, and at the beginning they started systemic Karma which, once in effect, constitutes that which is called Karma in our occult and oriental literature." - Master DK*

# **1 LAW OF LOVE, ATTRACTION OR BALANCE**

The greatest law is the Law of Love in this physical-spiritual Universe. It is the main law which governs the soul. In its simplest, the Law of Love is that law which places the welfare, concern and feeling for others above self. This is the great law that governs the soul aspect and is the one law that must manifest, while all the other laws seek to encourage and provide support. It is the Law which governs through Balance that which is produced by the rhythmic relation or interchange between the negative pole of form and the positive pole of spirit. The energy of love draws back to primal sources the material of forms, prior to rebuilding them anew according to the Law of Rhythm. As more of humanity awakens to the soul, Love's balancing quality of giving flows unimpeded into the world seeking receptive hearts and souls to respond and re-give the love it has received. Love is *"the trinity of divine qualities, Truth, Goodness and Beauty, in the external world of humanity of which the soul enjoined heart is the great detector. For the awakened soul, they hold a magnetic attraction. For those drawn to the opposite qualities, a gulf exists between the unredeemed persona and the Soul."*<sup>2</sup> Through unequal giving/re-giving balance is lost.

The foundation of the higher laws and laws of soul life is the Law of Love. It is the law governing the Logos of our solar system. The law of Love is controlled by a greater cosmic law: the '*Law of Akasha*'<sup>3</sup>, a great cosmic law which is the principle of the intelligence of substance. The Law of Akasha does not yet affect the earth but shall one day, when the Law of Love is demonstrating. The ultimate goal of the Solar Logos is actualization of the Law of Love in the solar system.

Love is the single unifying bonding principle in the Creator's universe. The Law of Love is that close affinity with all forces that you associate with as being "good". If the cosmic significance of love could be realized, people would see in love its highest function, i.e., the awakening of all the highest qualities of the soul and creative abilities. Precisely, this awakening is the chief purpose and the true keynote of love. Love is a unifying creative power. On the higher planes of Being everything is created by thought. But for the fulfillment of any pure thought form, there must be the duality, i.e., the male and female principles unified and balanced by Love. The Law of Love is that force that denies a place for evil in the world, yet resists it not. Love offers the path of least resistance by cherishing, nurturing and protecting the Good, True and Beautiful. Resisting evil simply strengthens it. "Resist not evil. Expose it, yes", say the Masters.

In its wise and just aspect, Love is the law of the solar system in demonstration on all the seven planes of physical and spiritual manifestation. Love is the impelling motive for manifestation, and love keeps all in ordered sequence; love bears all on the path of return to the Creator's bosom, and love eventually perfects all that is. What is the way of working with Love? Through harmlessness. "Harmlessness dissipates obstructions to the free flow of love."<sup>4</sup> Humanity's growing goodwill is an indication the Avatar of Love is approaching closer. "The light of the collective human Soul is becoming a powerful magnet for the greater light which the Christ and the spiritual Hierarchy embody. There will come a point when the force of attraction will be so strong that nothing can keep the two apart. And then the Christ will appear as the Teacher of Humanity."<sup>5</sup>

It is love that impels a person to aspire towards perfection of self, seeking to conform to the spiritual laws and demonstrate the guidance or teachings with right motive. It is love that builds the forms that cradle temporarily the inner hidden life, and love is the cause of the disruption of those forms, and their utter shattering, so that the life may further progress. The Christ impulse seeks to demonstrate divine love and moves life forward. The Aquarian era will be a voluntary union in love of all where "The Law of Attraction will orchestrate the main flows of human activity."<sup>6</sup>

Love manifests on each plane as the urge that drives the evolving consciousness onwards to its goal, and as love unifies, it is the reason behind the blending of the two kingdoms, human and spiritual to produce an enlightened humanity. Love works through the Creator's will in the building of the Creator's creation and in the rearing of the soul that shelters the Spirit, and love works through the soul for the full and potent development of that inherent divinity. "Love reveals the unity underlying all forms".<sup>7</sup> The Law of Love is the way of union with God. Though the human ego may be occupied with the pursuit of money and materiality, the soul is in pursuit of the love of beauty, the light of truth and the joy of service. Love brings balance.

Love's impulse is to demonstrate the qualities of the soul through the persona that hides the One and assists the soul in developing the powers of divinity. Love leads to the paths of the divine and the mystic, and leads to the union of the two. Love forms the sheath and inspires the life; love causes the Logoic vibration to surge forward, carrying all on its way, and bringing all to perfected manifestation. Love caused the primordial scission of Unity at creation's dawn.

Love is the method for reunification and Love is the Goal. The will of our Solar Logos is to evolve the system in its outer form, in fullest measure of expression of the divine qualities of Love-Wisdom. Love is in the divine mathematics of the universe, in the golden ratio expressing through form, the mathematical archetype behind nature's forms. Phi represents a universally active power, a formula of creative expression. The phi ratio is why scientists say we have beautiful asymmetrical worlds of galaxies and nebulae, and not a bland, homogenous sameness. "As above, So below"<sup>8</sup> is an ancient formula postulating the principle of the Anthropocosmos, Conscious Cosmic Man, The Cosmic Christ as the alpha and omega of creation. The universe is wholly active life infused with the love, purpose and divine intelligence. For what purpose? The wise know and say: "To be of the Wise is to want to give and to be able to give . . . to draw on the inexhaustible source and give this food to those who are hungry and thirsty."<sup>9</sup> Thus, the Law of Love is fulfilled through the one universal principle of *Rhythmic Balanced Interchange*, a higher consciousness term. Rhythm is the heartbeat of the universe, birth, rebirth, etc.. Balance is the equilibrium between the pairs of opposites, what holds the sun in its orbit around the milky way galaxy. Interchange is the interaction of the pairs of opposites through their giving and re-giving. For example a patient willing to carry out the orders of the healer or the student willing to carry out the guidance or teaching is re-giving the love it has received by responding reciprocally. The healed one or the student then gives what has received in blessing to others, freely, unconditionally..This is giving and re-giving, not giving and getting which humanity has chosen to do for so long. Interchange or reciprocal approach is one part of the Law of Love, humanity has chosen not to observe economically, socially and spiritually.

Balance is the one principle upon which the continuity of the universe depends. Likewise, it is the one principle upon which the continuity of man's transactions, his health and happiness depend. It is the manifestation of God's two opposing poles, spirit and matter, in all processes of creation. In it is the stability which lies in Cause. Opposites simulate oneness through their interchange. Balance governs equal giving between all pairs of unbalanced opposites constituting the physical-spiritual universe. In it is the instability of Effect. Instability is forever seeking to find stability. It can never find it, but it can simulate it by balancing its instability through equality of interchange. *Rhythmic Balanced Interchange*, a cosmological term, is the functional principle of love, and love is the one absolute law. Balanced inter-change between opposites repeats simulation of stability, and Rhythmic Balanced Interchange continues that repetition. Obedience to the one law is absolute. Man persistently violates it and instantly pays the price of his violation. "All the storms of earth cannot affect the balance of the earth, for balance in the universe cannot be upset. The earth continues in its fixed, balanced orbit with so much precision that its position can be determined at any time to the split second. If the earth disobeyed this law by the slightest variance, it's oceans would sweep its continents clear of all living and growing things"<sup>10</sup>

There cannot be balance where there is not love. There cannot be love, the sense of unity if there is not balance between the pairs of opposites. Love reveals the unity underlying all forms. Hate which is aversion for any object of the senses and desire which is an attachment to objects of the senses can only be cured by love. Hate is the reverse of brotherhood and the basic breaking of the law of this solar

system. Desire turned outward towards form is the great obstacle to realization of the spiritual self. Only when one realizes that the only reality truly left to desire is the one spiritual reality which is within one's self will selfish desire be negated. The Law of Love states: "the Kingdom of God is within." (Luke 17:20)

The universe was created by God for the purpose of expressing, Life, Love, Beauty and Perfection. "The principle of love is desire to give. God gives love by extending His Light—this is Grace God's love is a mirror of Light which reflects His giving of love by the re-giving of love-this is true forgiveness. The Law of Love is Rhythmic Balanced Interchange between all givings and re-givings. To one with cosmological consciousness, Love and Light is everything. Everything is the wave of dual light, both matter and energy at the same time that which gives and re-gives equally and rhythmically. God's Love is everywhere; His Light is everywhere. There is naught but good in God's omniscient universe. Evil is a product of man's thinking out of touch with the Law of Love. God extends His love, His power and His knowing, radially, points of omnipresent stillness to other points in the measure of His desire to give form to His imaginings."<sup>11</sup> Balance is the principle of unity or oneness between paired opposites. Love is the principle of equal giving between all unbalanced opposites and restores oneness through equality of interchange. God's entire creating universe is founded on Love and Light. Christ attained not only Love in the planetary sense, but also cosmologically. The future progress of humanity is aided and hastened because of His attainment. All co-creators, one with the Mind of God, support the equilibrium of the universe.

The Law of Magnetism, mentioned by the Tibetan Master DK in the books by Alice A. Bailey must here be mentioned, as it is a subsidiary of this law producing a unifying of the personality and the soul. Love fulfills the law of its own, consummates the Creator's perfect work, and reveals the Christ within the soul of man. Love is ever seeking an inlet whereby it may flow forth into the soul of humanity and pour itself out as all good to humankind.

\* \* \*

## **2 LAW OF CAUSE AND EFFECT OR KARMA**

This is the natural principle of karma or cause and effect and is a subsidiary of the Law of Love. When it is understood that God is Love, this law will be seen as serving the greatest good as do all the universal laws. Acceptance of the higher laws requires a degree of spiritual awareness and a willingness to accept responsibility for one's actions. Karma, a Sanskrit word, means every cause has its effect; every effect has its cause. In order to come to correct orientation and right choice, the Laws allow all freedom of choice. "It is the lack of true free will which is today holding up the final activity." <sup>12</sup>

All activity in creation happens according to the divine order of the Creator which allows for choice, transgressions included. Chance is but a name for a cause or effect not recognized. There are many planes of causation, but nothing escapes the law. It is ever at work with chains of causations and effects in all of life and manifested matter, where light and darkness exist. If a person was to follow each chain link of causation, it will be found that it has its beginning and endings in the realm of the emotions, the mind, the soul or spirit. It affects the throwing of dice on a gambling table or a rock slide that is caused by rain and wind. Each can be followed and understood to the consciousness which sees the cycles in all things, and realizes that all things follow the Law. Karma, the higher law of retributive justice is what regulates the duration and qualities of each soul's incarnation. Karma is for the majority of humanity unknown. It adjusts wisely, intelligently and equitably effect to cause, tracing the latter back to its producer.

When this law is used consciously, desired results can be produced scientifically in a person's life by steering him or herself along definite paths of causation. When the law is used in an unconscious and haphazard mind, the effects could become potentially disastrous for the individual or group of individuals. So called "accidents" could occur without warning to individuals who toil through life without awareness. We (humans) are responsible for the very thoughts that we produce and the final result of our own mental alchemy. Fear is one of the most dangerous mental causations that prevents a person from thinking and acting as the higher self would prefer. The cause of fear is the result of a lack of knowledge about the unknown God which should be the most important educational journey in a person's life. The causation of fear can only be removed through knowledge, wisdom, and understanding.

The greatest evil under the sun according to ancient philosophical systems is not knowing God, not knowing one's true self. In every minute thought, action, and deed that is performed, a person sets into motion unseen chains of causations and effects which will vibrate from the mental plane throughout the entire cellular structure of the body, out into the environment, and finally into the cosmos. Eventually the vibratory energy returns to its originator upon the return swing of the pendulum. All this in less time than the twinkling of an eye. Because there are seven dimensions of reality in which causations can occur, we remain unaware of many reasons for effects.

By understanding our true nature and the higher laws one can learn to operate as an attuned living soul instead of a dulled personality accumulating restrictive karma.

This law is scientifically capable of manipulation by the enlightened human soul. The karmic law requires that every human wish find ultimate fulfillment. Therefore, personal ego desire is the chain that binds man to the wheel of rebirth.

When humanity finally grasps the meaning of the phrase, "As ye sow, ye shall reap," the human being will advance from spiritual adolescence to adulthood and Earth will be born anew. When there is no belief in a higher power or no connection with the soul, there is no cognizance of the fact that actions have consequences. The culprit whose crime remains undetected breathes a sigh of relief and tries to dismiss the episode from awareness. It will come as a shock to the majority of the race to discover that karmic debts eventually come due. Human life on Earth evolves according to karmic law under the supervision of Lords of Karma.

It is said when Christ comes at the end of the age, He will resurrect justice and righteousness by justifying the ledgers and balance sheets of the old cycle. What does this mean? In His role as World Teacher, He will inaugurate a process that will occur in consciousness or in the mind, in which each individual soul becomes aware of the ledgers to be balanced and lessons to be learned in the book of life. Christ will thus initiate the education of humanity from a new plateau and humanity will no longer be wandering in the dark, oblivious to the laws of cause and effect or the purpose of being alive. For the human souls who cross the threshold into the new Earth, the experience will be that of a realm in which frequencies of the divine calls the soul onward. This will be greatly facilitated because of the Christ's relationship with Sirius, explained later in Part III.

This law is devoid of sentiment. Its goal is to balance the scales of justice on the soul's journey toward perfection. Nothing that happens in life is accidental or coincidental. The word 'coincidence' is a veil for the work of invisible forces that shape events and destinies of souls. 'Synchronicity' is a closer approximation to the subtle workings of these forces. The most significant synchronicity of our time is the emergence of a body of souls with the quotient of light that opens the portal to the age of light. They will be joined by legions of souls presently out of incarnation who bear the same measure of light. Those souls who lack even a glint of light will remain at their present stage for the next evolutionary cycle. The law is precise and exacting.

"As you mete it out to others it is meted out to you" is a familiar iteration phrase of karma. This law dissolves many mysteries of life in the form world when understood as follows: *"Karma is created, weighted, or eased mainly by THOUGHTS. Precisely, thought and inner motives weave our aura, which is a magnetic field that either attracts or repels possibilities. Indeed, thought-motive—this decisive factor of our karma—is often overlooked by those who discuss karma. But were it otherwise, it would be impossible to break the magic circle of causes and effects. For all is karma and all is held by karma."*<sup>13</sup> Right thought-motive transforms the human being into a divine Being. Until that time, causes and effects shape life cycles in the goal of bringing the soul's light into the foreground of consciousness.

With the Christ as World Teacher in the new era, freeing the self from karmic debt will be the concern of all as challenges and limitations will be seen in the light of the soul. In this light, forgiveness will be more common and blame less common. Engaging in blame will be seen as ignorance of the

laws of cause and effect. Suffering is the impelling force in this scheme of evolution that leads the awakening soul to the path of transformation and eventually to transfiguration by divine light. It is the experience of spiritual joy that replaces suffering when one has shifted into higher planes of etheric existence. The non-blaming, forgiving wisdom of Karma states that our burdens are perfect as they are, that the Universe honors all decisions and with awareness and focus, conscious action can balance the scales of cause and consequence.

It is important to repeat that In the new earth, the human soul will grow and expand, not through the process of suffering but through joy. There is much to ponder regarding the law of cause and effect in this last statement. When the Temples of Initiation, in essence soul manifestations of humanity's joy, are once again restored, three subsidiary karmic laws dealing with the life of the advanced disciple known as: the Law of Necessity, the Law of Liability and the Law of Transformation will be given out. The knowledge involved is not yet time. However, there is a profound connection to ponder on the relationship between the star system Sirius and Earth regarding the Law of Karma, covered earlier in the 8th Missive.

\* \* \*

### **3 LAW OF REINCARNATION OR REBIRTH**

Each life is an assuming of ancient obligations, a recovery of old relations, an opportunity for the paying of old indebtedness, a chance to make restitution, an awakening of deep-seated qualities, a recognition of old friends and enemies, the solution of revolting injustices and the explanation of that which conditions a human being and makes her/him what she/he is. The term *life* from this law's point of view means the rebirth of the soul into a new physical body. All life forms go through a cycle of birth, growth, death, and rebirth. This law, when understood, will do much to solve the problems of sex, marriage and suicide. It will create a sense of responsibility and a person who treads more carefully on the path of life. It will engender responsibility, the responsibility for alignment with the higher laws. *"When Christ reappears as the World Teacher, the scales of karma will be balanced and the heavy load weighing on the heart of humanity will be lightened by His message of renewal and rebirth."*<sup>14</sup> Higher law will be seen not as something to choose out of guilt or fear, but will be seen as part of one's natural alignment with the soul. This will lead to a collective intention within humanity for life to be joyous, loving, just and good. An understanding of this law will lead one to the portal of initiation. That which keeps one on the cycle of death and rebirth will come to be rejected. Christ will also inspire the accepting of responsibility for self and others which is born of

responsiveness to the true needs of the many through service to the Plan and humanity as a whole.

This is the law that also deals with taking an outer garment or form, another words reincarnation. When etheric vision is more prominent among members of humanity, the Law of Rebirth will be studied regarding the devic kingdom—the building forces of the Universe, those which construct the form, the fabricators of the outer garment of God and their relationship to human spirits. Imagine a world in which all the veils of life are cherished and loved, but where form is known for what it is—the veiling vase of life. Then, imagine a world where forms permit the nature of the Self to penetrate the veils of life, revealing all the radiance of God, God's power and magnetism; revealing all there is of form, life, beauty and usefulness, and you will understand the relationship between soul and form.

\* \* \*

## 4 LAW OF ANTITHESIS

According to the Law of Antithesis in Agni Yoga, "the worst brings the best. Who, therefore, of the valiant toilers of the spirit, will not accept the full chalice? In the Teaching, acceptance of the full chalice is also advised, and we shall not deviate from this Advice. Let us not think that Christ, this Great Spirit, did not know what was destined for him. To each bearer of the achievement a full chalice is offered, and he himself chooses whether he wishes to accept it in its entirety or only a portion of it." It is a law which allows one's vibration to adapt so that it responds to one's need.

This Law is closely associated with the philosophy of non-resistance propounded by Gandhi and which Christ emphasized in his teachings. The framework non-resistance is not one of passivity but is a dynamic radiation of the inner SELF. It is the ability to think and act with pure reason or sound-minded-ness, leaving the individual free to think and act as he/she should in perfect harmony with Higher Will or the Universal Mind—the very essence of mastery.

Helena Roerich has an interpretation of this law which will bring understanding from her own experiences of life's vicissitudes: *"Having suffered a deep spiritual disillusionment on my path, I have lost will and faith. Nevertheless, I still wait for the Teacher!" But if you wait, that means you have hope; therefore, faith is not yet lost, and this is most essential. Thus, let us go over your disappointments together and transmute them into accumulation of the great life experience, in the furnace of which our spiritual essence is*

*the dark ones constantly arouse mighty elements, not knowing, of course, how to master them.conceived and strengthened. No theoretical knowledge, no philosophy can give you spirituality; only by drinking the cup of life's poison, with all its illusions, can we accumulate the Chalice of Amrita. And so, I would like you to establish a clear point of view toward all disappointments. Should one be terrified by the destruction of illusions? Each broken illusion is another step of knowledge. True knowledge is austere, as is the spiritual path, and only the spiritually strong can hope to approach the path of accelerated spiritual development. Moreover, this path can never be eased, since only suffering, only personal tension can transmute our energies and give them the necessary balance. But blessed is he whose heart is aflame with the exaltation of heroic achievement; supernal joy becomes his lot. Thus, kindle all the fires of your heart, and exaltation of the spirit will be yours." -Letters of Helena Roerich, vol. II, 1 Oct. 1935.*

Then, there are those forms which according to this law, the Masters of Wisdom look for which oppose the antithesis of life, such as people and communities that display the best manifestations of labor, individuals, groups and communities which the spiritual Hierarchy can enlist for assistance. If handled with a sound mind and a sound heart, the understanding of this law can reinforce the path of ascent with life. Dissonances may be useful in the way they affect people, for as an antithesis they can reinforce the rhythm of consciousness.

## 5 LAW OF ALIGNMENT

This is not about personality alignment with the soul but living in right relationship to the higher laws which in the new era will replace the current societal and man-made laws. Alignment with higher laws will come basically from acknowledgment of the Law of Cause Effect and Law of Rebirth and that which entails Truth and Perfection. "Social reorganization and economic reform must emanate from the awakening consciousness of man. One cannot legislate or lay down rules that will govern man when under a spell of hypnosis. You cannot organize men's thoughts and motives until they conform to each other. It is in this realm that all differences arise. One man is selfish, another is unselfish. One is successful and another is a failure. One has unusual strength and ability, while another is weak and incapable. One thinks only of his material welfare and another thinks only of his spiritual welfare as entirely divorced from his outer nature. How can such diverging thoughts and feelings be organized into an harmonious mass? Only in man's innermost nature is he identical with his neighbor in thought and motive and only through bringing out what is within can there be peace and harmony in the earth." 15

At the highest levels of consciousness there exists ultimate Truth—the principle upon which the entire universe rests. Truth on that level is inseparable from Light, Love and from Life. Truth is also inseparable from spiritual Law and thus it is the bedrock of the functioning universe. When Law is corrupted by the absence of truth, the result is disorder and decay. This has been occurring in the outer world to the extent that natural law has been countermanded by

humanity with dire consequences to planetary life. The news is full of the many versions of truth competing to occupy human minds in this time of crisis. The way to discover whether to believe an idea or a theory is to co-measure it with your perception of Higher Truth. The mind alone cannot be relied upon to separate truth from illusion. "The discerners of truth is the heart, for the heart is the portal to the down-pouring light of the soul that penetrates the mind with its wisdom. How does your heart respond when you land upon a statement of truth? Is there an energy flow that charges the cells of the body with light? Is there a sense of well-being that flows from the soul's registering of Truth?"<sup>16</sup>

Failure, fear and fear of failure when seen in their true light are great teachers of forgiveness, karma and perfection. Even the best disciple, the highest initiate and Master has failed, for everyone has failed. Truly, there is no failure, only loss of time. Important laws closely related to the Law Alignment are the Law of Karma, Law of Perfection and Law of Co-creation.

Immanuel Kant, believed universal law was fundamental to ethical living. In order to know what is universally right, Kant believed we must ask of any rule — is this one which we would want to apply to all people and would it produce the sort of world in which everyone was treated with dignity and respect. Kant is also known to have said: *"Live your life as though every act were to become a Universal Law."* Regarding actions aligning with spiritual law, ask yourself: "Would I want my act to be a universal law?" Ask the discerners of truth, the heart, for it knows. It is the still small voice of the soul, aligned with law that will guide your actions.

## **6 LAW OF EXCELLENCE OR PERFECTION**

This law concerns the absolute perfection of the process of our unfolding, self-perfection. The formula proposed is general in nature and it must be remembered with all the laws that only the enlightened mind can penetrate into the structure of human evolution. This law is not about the physical form or environment that one has chosen and designed for one's self which is the perfection of one's soul design but will be more concerned with group activity and culture in the new era. From a higher perspective, everyone and everything is unconditionally perfect. "What constitutes perfection? In essence, it entails living in alignment with higher law. This is what will transform the human race and create a world that is new. It is from the aspiration of humanity to live in spiritual alignment that new laws will emerge. Evolving humanity, under guidance from the Hierarchy, will establish principles for spiritual living to which awakened souls, by their nature, will willingly adhere. There will be no need for external control or imposition. These will be laws that serve the Greatest Good."<sup>17</sup>

From the conventional viewpoint of the personality, perfection doesn't exist until the etheric energy centers or chakras have been purified for the entrance of higher energies. Achieving a perfection takes patience and practice. Not excellence in pride of mental development or over-estimation of one's mental powers but that of Self realization. "Every step toward self-perfection serves the

advancement of the whole group. Thus, it is asked the work be taken seriously of mustering the will to more fully embody the essential qualities of the soul."<sup>18</sup>Aspiration is key to self-perfection, an aspiration that is inclusive and universal. A beautiful tale related to the Buddha goes like this: **In the belief He** had attained the last stage of perfection the Buddha was about to abandon existence in finite space and time, to relinquish all sorrow and suffering for the pure being of bliss universal and eternal. It runs as follows: "The unique perfection of myself I dreamed, the perfection of my own character and personality is but imperfection while one other being—one single gnat—still suffers imperfection of its identical kind. No being may reach bliss alone: all must reach it together, and that, the unique bliss proper to each. For am I not in every other being and is not every other being in me?"<sup>19</sup>

The world changes as people change. Only when one walks the path of love, truth and beauty does perfection manifest. The Master Morya says this: "The World is striving for the crowning perfection. The closest to perfection will be the path of Beauty. If one should take all distorted manifestations of life and line them up with Beauty one would find the Law of Perfection. If we take the unbalanced conditions of all principles introduced into life and line them up with Beauty, we shall arrive at the Law of Being."<sup>20</sup>The law of Being is destined to come into activity in the next solar system and the law of Perfection is guiding the activity.

"...to not act as if you are Beings beyond yourselves, but of acting as Self-realizing human beings on the Path toward perfection. This is what a soul on the path of living discipleship becomes and what the world needs to see."<sup>21</sup>

When we live up to these words, we expand into the grace of our higher selves. There are luminous spheres that have achieved the condition in which there is no imperfection in the conscious opposition to good by any evil force. One such radiant sphere of God's perfection exists in the livingness of the star system Sirius.

\* \* \*

## **7 LAW OF GOAL FITNESS**

This is the law that nature follows. Rightness, aptness, appropriateness to the path and striving. An understanding of the application of human action in life. Where the power of higher love functions, goal fitness is at work. Discipline is required for goal fitness and commitment until the goal is realized. Goal fitness comes from living the teachings of the Great Ones, such as Christ, Buddha and the Masters. Goal fitness is a part of the evolutionary development towards which humankind is moving and will demonstrate the Christ impulse. This will become a fixed idea in the minds of all men and women and will lead to the manifestation of the Divine Plan.

The Divine Plan, as far as we can understand it, is that both the form and the Soul are endowed with Divine Purpose, which can only be revealed as the duality of Soul and form is fused into a oneness. The form then, is but a vehicle within and through which the Divine Plan and Purpose can be expressed. It is the correct handling and surmounting of every crisis large or small that confronts those on the path of ascent. Every Master prior to mastery and every initiate prior to Initiation had to prove through testing their readiness.

The development of the intellect is one attribute that is required to do the work of treading the path back to full soul consciousness. Then there is the development of the buddhic or wisdom-love aspect which demonstrates a fitness for further progression in the awareness of the state of pure Being. "Wherein wilt thou affirm the measure of thy works? If thy deeds be useful to the world, then is their measure great. Wherein wilt thou affirm the quality of thy works?"

If thy deeds benefit humanity then is their essence of good."<sup>22</sup>

This is the law that deals with economy of force and adjusts all that concerns the material and spiritual evolution of the cosmos to the best possible advantage and with the least expenditure of force. It is the law of the physical atom and makes perfect each atom of time, each eternal period carrying all onward and upward and through, with the least possible effort, with the proper adjustment of equilibrium and with the necessary rate of rhythm. The significance of rhythm is that it holds a hidden meaning for goal-fitness which expansion of consciousness reveals. Yet, applying the teachings and the laws to the task or mission is the best type of goal-fitness training. All the Masters follow the principle of goal-fitness. Sometimes a Master waits centuries to give a sacred mission.

The person who aims at providing a point of contact between conditions of chaos and Those Who work for constructive ends and order, should likewise use that most necessary factor of goal-fitness, a common-sense that comes from soul consciousness. This involves always obedience to the law of goal fitness, economy of force and a true sense of values. Where these are present, time will be economized, energy will be wisely distributed, excessive zeal will be eliminated, and the Great Ones will be able to depend upon an aspirant's sagacity and thus find a helper. Thus will the capacity of serving groups in the future be enhanced.

\* \* \*

## 8 **LAW OF DETACHMENT**

The Law of Detachment functions through the principle of Divine Love. It is not a self imposed egoistic indifference or non caring to people, events or things. In the reorientation of the affairs of men and women to the life of the Soul, the aspirant recognizes Love as the soul in others. This allows for registration of suffering with wisdom. It must be remembered that rounds of suffering are like purifying fires destroying the illusory walls of separation that have defined the human experience until now. "Such experiences testify to the force of love that underlies the cosmos and is the beating heart of the Higher Worlds. A force that is now accessible to you as you tap into its flow."<sup>23</sup> Let it serve as a healing balm as you pursue the path of purification and encounter wounds of the past. Love is the first step toward the attainment of the common goal of man; the manifestation of Brotherhood. It is a recognition first, those of her/his immediate group, as souls, and gradually all of the connotations of relationship based on a Christ-like love seep into the consciousness. One experiences the greatest of all gifts, the richness and fullness of the Love of God in man.

One of the most important steps taken toward this goal is the attitude of detachment, a type of dispassion needed for the spiritual unfolding of the soul nature. "It is difficult for the neophyte to be impersonal when her/his spiritual unfoldment is concerned. Yet the very earnestness of her/his aspiration may serve as a hindrance, and one of the first things the neophyte has to learn is to go forward along the path, adhering to the rules, following the practices, employing

the means and steadily fulfilling the law and at the same time to be occupied with the vision and with service and not with himself. It is so easy to be the victim of high desire and so busy with the reactions and emotions of the aspiring lower man that rapidly one is enmeshed afresh in the toils of the versatile psychic nature."<sup>24</sup>As Christ and Buddha taught, detachment from the self along with dispassion and discernment brings about greater participation in life and helps to adjust to different Realities.

As an effect of Divine Love, it is actually an attachment to the Soul of all life which results in a detachment from the form. Everything has a times and usefulness, even attachment. Mastery says not to hate attachment but see its plan and purpose, to love with detachment and serve with detachment. There is no pain or agony for the Master who has attained liberation and has left behind all hindrances and this they have done for no selfish purposes. It is a shock to many human beings to discover the existence of a spiritual kingdom who have lived under the 'modern age' assumption that there is no God and there will be no consequences for breaking moral laws and transgressing against fellow humans — a result of the lack of spiritual detachment. The recognition that a spiritual kingdom exists highlights the critical importance of detachment. The aim of the spiritual Kingdom is to aid and help humanity with wisdom and love. The Beings of spiritual kingdoms work with true detachment that growing identification with the soul brings. Mere practice of detachment as impractical priests do is in vain. Detachment comes from an inner growing of soul consciousness.

## **9 LAW OF RESONANCE, CONSONANCE OR CONCORDANCE**

Resonance occurs when two or more interconnected objects or living organisms share the same vibrational frequency. When one is vibrating, it causes the other to respond in similar vibration. These two will potentially amplify into greater harmonic resonance. Resonating to the forces of “life”, forces of goodness, gratitude, and love, will amplify these resonances and strengthen the chain of consciousness dramatically. Christ said: "When two or more are gathered in my name..." Resonating through ego to the forces of fear, rage, frustration and resistance (to what “is”), also amplifies those disturbances in the body-soul field greatly, cutting one's self off from higher currents of light. When resonance is great enough between the soul and personality, the two become one in consciousness. The same is true for the 4th and 5th Kingdoms in nature. When there is enough vibrational resonance the two realms will achieve a manifested unity. The words, resonance, concordance and consonance will be used interchangeably.

Every soul is divine and thus inherently resonant with spiritual realities. However, there are human souls that are more resonant than others. "Dwelling within such souls is a bright spark of recognition of the spiritual necessity for the Christ to return to the world at this time. Because of this perceived necessity, such souls are willing to put themselves through rigorous tests and trials along the path of discipleship and willing to subject themselves to the inner

scrutiny of self-examination required. It is because of this there are those willing to engage in an accelerated process of self-transformation for the goal-fitness needed to fulfill a specific role of carrying out a portion of the Plan as formulated by Masters of the spiritual hierarchy."<sup>25</sup>

The intensification of energy between the disciple and Teacher necessitates resonance and the means for disciples to achieve Ashramic resonance are benevolence, aspiration and gratitude which cultivates soul consciousness in the life of the disciple. "With such a consciousness, one may verily become a co-worker for the transformation of life."<sup>26</sup> Spiritual Hierarchy is an excellent example of concordance, always ready to help. Resonance precipitates help from "above". "When people will understand the ceaselessness of manifestation consisting in changes of existence, the principle of concordance may become close to man. Great help may result from the realization of this principle."<sup>27</sup>

Consonance is harmonic and sympathetic vibration. This word also refers to the harmony that exists between an individual's vibrations and the cosmic vibrations which results in a great creative tension, an activity which draws one onward in the direction of evolution. The soul in sounding forth its note creates in consonance with its physical instrument until eventually its expanded awareness is in consonance with the Divine Mind and Plan.

In the transition to a new era, as groups come under direct guidance of a Master, spiritual concordance will clarify the the difference between a concordant soul and a group soul for the spiritual aspirant and disciple. "Let us make an end to the confused conception of a group soul. It is incorrect to call

the concordant soul a group soul. Some translations and commentaries have produced this confusion. Plato's conception of twin souls not only was closer to the truth but was expressed beautifully. Thus, let us not use this erroneous term group soul; let us replace it with the term spiritual concordance."<sup>28</sup> The term group soul implies a collective group of souls in which there is: "The possession and recognition of a united vision to which the individual in the group subordinates himself and there can also exist simultaneous rapport of the group members with the soul on its own level which leads to spiritual concordance."<sup>29</sup> Concordance builds soul identity and creates naturally new correspondences. Case in point, the personality awakening in soul identity, naturally disassociates from old relationships and through the law of attraction re-discovers new ones. Therefore, resonance recognizes the existence of the individual seed of spirit and simultaneously the concept of change. Ever greater growth in spiritual identity leads to ever greater correspondences of resonance.

The dual journey of spirit into embodiment and its return or liberation from dense material form occurs by grace of resonance, "which are only the appeals of Consciousness to a more enlarged consciousness."<sup>30</sup> Another words, the higher will impresses itself upon the lesser will until there is a degree of resonance. It is this law which allows a Master to control and direct powerful energies in consonance with God's Divine Plan. Without this law it is impossible to affirm creativeness and the development of the fiery receptivity that allows concordance.

This law is also connected with the Law of Perfection. "We

learn to perfect ourselves in consonance with Christ's injunction, "Be ye therefore perfect," in order to have something to contribute to the group good, and in order to serve Christ perfectly. Thus the spiritual reality, spoken of by St. Paul as "Christ in you, the hope of glory," is realized and can manifest in full expression. When a sufficient number of people have grasped this idea, the life of Christ will flower forth in the human kingdom." <sup>31</sup>

\* \* \*

## 10 LAW OF SUBSTANCE

This is a law that will be found operating in greater capacity in the new era when the Law of Akasha (mentioned in the Law of Love) which deals with the intelligence of substance is further integrated into group work. However, it needs to be introduced at this time as it is closely connected with the Externalization of the Hierarchy and energies of the subtle world. The Law of Substance and its associated study of energies are coming into prominence as a result of groups forming that are under the aegis of a Master's ashram for purposes of implementing the unfolding Plan.

The true study of spiritual energies or 'Occultology' is the study of the why and how of phenomena (the unreal), the nature of Substance (the real), the nature of Life or Energy (the real) and the nature of Self and not-self. Life and Substance are one and the same but different aspects of the one Reality. It is a law for the future mental or Aquarian type. Essentially, occultism's keynotes are built on the philosophy that: 1) There is naught in manifestation except organized energy, 2) Energy follows or conforms itself to thought and 3) The occultist works in and with energy. It is the finding out of the method whereby results are achieved, and it involves close analysis of events and circumstances in order to discover their governing laws.

It is a law which will become merged with the Law of Love in this cycle and is closely connected to purpose and intention. "The thought of God brought the universe of energies into organized form upon the highest of the seven planes, or upon the first cosmic etheric level. These energies have for untold aeons been directed from the lowest of the cosmic

etheric planes, the plane which is called the buddhic and regarded as the first definitely spiritual plane and also the plane upon which the spiritual Hierarchy reside...the Masters have manipulated these energies in conformity with the Plan, which is the blueprint of the Purpose. In the great Approach of the Hierarchy to humanity, centers of energy direction will be found wherever the Ashram of a Master is located in any part of the world. This is a statement of profound significance; it is an indication of hierarchical policy and a mode whereby modern science (working as it does with energies) can be brought into cooperative association and relation [through spiritual resonance and keen discernment] with an Ashram upon the etheric-physical plane, knowing it for what it is—an entirely new departure."<sup>32</sup>

The laws that govern the life of the disciple are the same laws that control all life. The difference consists in the partial realization, on the part of the disciple, of the purpose of those laws, their *raison d'être*, and their conscious judicious application to the circumstances met in daily living. By conformance to the law, the personal life is transmuted. This law puts the disciple in the position of wisely utilizing the higher storehouse. It is the manipulation of matter, and it's adaptation to the interacting forces of supply and demand. It is one of the means whereby the Divine storehouse is entered and the method whereby that storehouse is kept replenished, and to comprehend the means whereby the bounteous supply of Spirit is brought in contact with need. A maxim can here be given regarding supply and demand: "It is only as a skillful use is made of the supply for the needs

of the worker and the work that supply continues to pour in."<sup>33</sup> The secret is: use the energies skillfully according to need, and take. Only as the door is unlocked by the spiritual need or demand is another higher door unlocked permitting supply.

A note would be useful on responsibility and the four pillars of the spiritual path regarding the life of the human being on its own plane. There are four soul development conditions the aspirant or disciple on the spiritual path is responsible for, not the soul or the Master. These are practice, purification, discrimination and discernment. Discrimination is to know the difference between self and non-self, real and unreal, choosing that which unfolds the inner life. When the four pillars are functioning in the life, then the soul on its own plane attends to its part of the liberating process of mergence with the personality and this occurs from above downwards. As this two-way process is carried on, the consciousness of the human being is transformed. The vibratory frequency of the bodies (physical, emotional and mental) which previously veiled the reality become lighter and no longer act as thick veils, hiding the soul and the world the soul normally lives. The aspirant becomes aware of a part of himself before hidden and unknown. He approaches the heart of the mystery of himself and draws closer to the soul's presence. This is discernment, a new factor in the consciousness—the ability of the personality to discern in consciousness that of the soul's presence. The human being then seeks to make the consciousness of the soul a conscious experience upon the physical plane. In the coming age of new energies, laws and substance, this will continue.

## **11 LAW OF SACRIFICE AND DEATH OR DISINTEGRATION**

It may be difficult to equate Death with Sacrifice, but, if deeply considered from the perspective of the soul, it is the death of control by the personality. The Law of Sacrifice and Death is the controlling factor of the physical plane. It is one of the seven laws of our solar system, under the three major laws. This is a law which governs the gradual disintegration of concrete form and their sacrifice to the evolving life with the purpose of destroying the final sheath which separates the perfected soul. It affects the evolving human being in the three worlds—physical, emotional and mental. The destruction of the form, in order that the evolving life may progress, is one of the fundamental methods in evolution. This is symbolic message of crucifixion, the basic law of all group work, the governing principle which results in each human unit eventually becoming a Son of God that works for the good of humanity.

In the soul-infused personality or living soul, there comes a time when the inner light irradiates with such force that it brings about the disintegration of the causal vehicle or soul body of the "man"/"woman" and the final merging with the Monad (divine spirit) occurs. The Monad being an indivisible, indestructible spark of divine fire at the heart of every living being. It is the originating cause of the reincarnating human soul and the impelling energy of divine will. This is an electrical phenomenon that the Law of Death in the subtle bodies is responsible for — the destruction of the egoic sheath or the causal body. The living soul then becomes a

living divine soul on a higher turn of the evolutionary spiral expressing at long last the fullness of the Christ principle within: "Christ in you the hope and glory"<sup>34</sup> no longer bound to rebirth. Liberating and revealing from form the Christ principle, and expressing it through the art of creative living will be the great goal for humanity. This higher law of Sacrifice and Death is different from the Law of Sacrifice which is one of the Laws of Soul Life. The former is about *destruction* of the Egoic body and service to the evolving life while the latter as will be seen is about *giving*.

Death of the physical form is both an illusion and a teacher of karma. As an outcome of the destruction of Atlantis it was necessary that humanity learn that *"death can either be the ending of a cycle and an automatic response to the great Law of Cycles which continually institutes the new and ends the old, or it can be brought about by the misuse of the physical body, psychologically by misapplied energy and by the deliberate action of the man himself. The man who deliberately sins, and who is psychologically wrong in his attitudes and consequent actions, commits suicide just as truly as a person who deliberately, through self harm leads to the death of the physical form. This is seldom realized, but the truth will become increasingly apparent."*<sup>35</sup> This law is and will be seen as a constructive activity, beneficent and corrective.

\* \* \*

## **12 LAW OF SUPPLY AND DEMAND**

It is this law and its implementation by a wisely established body of enlightened governing beings that will determine the new standard of living in the new era of spiritual and not material values. This law has nothing to do with demands of the lower nature or materiality or the old ways of manifesting. When there is no longer desire for the separated self the clue to this great law is found. This law operates on the principle of justice and plenty for all and a consciousness rooted in inseparability. It will come into full swing when the world trend is towards living spiritually. It operates in close connection to the Law of Substance. Implicit is belief in the principle Universal supply. In the new era this law of manifestation will be mastered as consciousness expands into union with God and the fulfilling of creative relationship with the spiritual Hierarchy.

It is based on the statement "God knows your needs even before you do, trust in Him"<sup>36</sup> and when we ask: How does my request serve all humanity or at least serve others than self? In what way can the Law of Supply and Demand be implemented so that there is justice for all and plenty for all? Is my request worthy? The world is moving into the new. In the past one could ask by prayer, visualization or affirmation which harmed no one, benefiting all involved. In the consciousness of the new era, one will reach a point where asking is not necessary. The consciousness being focussed in oneness, love and in creative relationship, service or work in and of itself will evoke the perfect supply from God, even before the need is asked. As the laws and guidance given are practiced with trust in God, in each other, in the process — humanity becomes a center of spiritual being from which will spring, a world of wonder, beauty, magic and joy.

## 13 **LAW OF GRAVITATION**

The Law of Gravitation is a subsidiary law of the Law of Attraction and closely connected to form building. This law is can be puzzling and confusing for some. Of all the laws it works two-fold. For example, with the force of gravitation, science has found ways to isolate humans and objects from it in space exploration, not so from the 'law' of gravitation because material science does not yet understand its spiritual aspect. The force and the law are two different things, but from the law, the force of gravitation manifests on the physical plane.

There are several aspects to the Law of Gravitation. As a force, it shows itself as the power and the stronger urge that a more vital life may have upon the lesser, such as the power of the spirit of the Earth (the planetary Entity, not the planetary Logos) to hold all physical forms to itself and prevent their "scattering." This is due to the heavier vibration, the greater accumulative force of the body of the planet itself. This 'heavy' force works upon the lowest or densest aspect of all physical forms. This is the force of gravitation physical science is familiar with.

The Law of Gravitation dealt with here, shows itself in the response of the soul of all things to the greater or the Oversoul of which all souls are a part and identical with. It is this relationship which constitutes the basis for the scientific belief in Brotherhood. It governs the relation of a unit of life in form to its emanating source and is thus connected to divine purpose and the intent of units of life to find their way back home, to return as consciousness to the registering source. One aspect of gravitation attracts form, the other the soul.

This law affects the two lowest forms of divine life in the human kingdom, the personality and the soul, but not the third or highest aspect of a human being — the spirit or monad. It is this law which deals primarily with the force of systemic gravitation emanating from the physical sun and from the 'heart of the sun', the mysterious subjective sphere which lies back of our physical sun, the spiritual source of light and love. This systemic force of gravitation emanating from the objective physical sun and subjective 'heart of the sun' influences the personality and the soul, producing awareness of the relation of the lower self and the higher self. The human being through the influence of spiritual light and love, becomes aware of his/her essential duality as personality/soul and eventually through self-transformation attains to full self or soul consciousness.

There is a final synthesizing force which might be regarded as divine gravitational activity, due to the working of another even higher law, the cosmic Law of Life or Synthesis, emanating from the central spiritual Sun, the sustainer of Life. This Sun acts on the Monad, the highest divine aspect of a human being.

The gravitational activity which emanates from the heart of the sun is a systemic activity and law, while the other which emanates from the central spiritual sun is governed by a cosmic activity and law called the Law of Life. The Law of Life will come into play in this solar system's next and final incarnation, in the far distant future, in its journey back to spirit.

## **14 LAW OF MAGNETIC CONTROL**

One of the seven laws of our solar system, under the three major laws is the Law of Magnetic Control which is slowly coming into prominence. Through this law, the Christ impulse, the great force of evolution, drives the Ego [Soul] to progress through the cycle of reincarnation back to union with its source. Through the process of incarnation she/he finds her/himself, and then—driven by the indwelling buddhic or Christ principle—transcends the lower self, and finds in all selves, the unity of the soul. It was the Law of Magnetic Control that effected the juncture and merging of astro-animal man 21 million years ago, and the descent of spirit, using the spark of mind as the method of at-one-ment.

This law holds the evolving lower self, the personality in a coherent form through the controlling influence of the soul. Via the Monad, (individualized divine spirit) this law also controls the Ego (Soul) in the causal body. This magnetic control is paramount on the buddhic plane. In the development of the control of this law which is to be mastered, lies the control of the personality by the Monad via the egoic body. An effect of this magnetic control on a physical level, is that every thought creates an effect (karma) that comes back to sender. It is a law that though identification with the soul allows one to develop magnetic usefulness in group work, drawing others to one's self through love of the soul, which will greatly increase the power to serve. So it was, with the disciples who gathered themselves around Christ two thousand years ago. A sense of greater achievement is experienced for members of a group disciple, that propels activity forward. This Law is coming into prominence as more personalities come under the control and influence of the soul and find themselves in resonance with the spiritual Hierarchy on the buddhic plane.

## **15 LAW OF ENLIGHTENMENT OR CONTINUITY OF CONSCIOUSNESS**

The Universe is in a continuous and endless process of creating and everything is life interconnected with consciousness evolving within it. The fusion of human awareness (personality) with soul consciousness will create "continuity of consciousness". Studying the Laws of the Soul and a growing resonance with the spiritual Hierarchy will inevitably expand human consciousness into fusion with the Mind of God. Another term for enlightenment is "continuity of consciousness". This law will govern the *Science of the Antahkarana* which is under the greater *Science of Light*.<sup>37</sup>

To bring forth the continuity of consciousness, identification with the soul is the key. Therefore, the need is to practice staying connected with the soul. The problem is aspirants or disciples intend to stay identified with the soul, but every time so often forget. The lower mind has the weakness of forgetting. It cannot maintain the needed tension for continuity of consciousness. Even knowledge that is received from books is easily forgotten. Therefore, the knowledge of the continuity of consciousness cannot be acquired through the lower mind, but only through persistent practice and contact with the identity of the soul. To have continuity of consciousness, a stable thread of consciousness related to a purified etheric body is needed. A steady subtle body of golden light has to be built before the physical body falls away. At the Third Initiation the subtle body is stabilized. Once stabilized, the consciousness of a human being can continue incarnation to incarnation without loss of memory or knowledge. As long as consciousness prior to the third initiation is interrupted after it leaves the body, memory is

lost, and much of the knowledge gained in the previous life is lost. Thus, only slow and cumbersome progress from life to life is made. If the continuity of consciousness, is maintained knowledge of what was done in the previous incarnation is retained. Even if it cannot be recalled immediately, it may be quite easily to remember what was known before through a book or through what someone says, or through reflection. Once the etheric body is purified, the work and responsibilities for service increases. This is understood as an aspect of the "*Supreme Science of Contact*."<sup>38</sup>

As we ascend still further in consciousness, we attain not only the etheric body of light but also the higher body of diamond light also called by its ancient Egyptian term the Merkaba. This signals a point along the path of ascent of a fusion in consciousness between the personality and monad, when we are able to free ourselves from the causal or soul body. This happens at the fourth initiation symbolized by Christ's crucifixion. Directed expansions of consciousness occur without the loss of one's unique individuality.

More of humanity is destined to take the higher initiations in the coming new era on a more refined plane of the etheric. Working with the Sciences of the Contact and Light, subtler organized energies of color and sound will accelerate the enlightenment process. This will be greatly facilitated because of '*divine temples*'<sup>39</sup> in the new era.

A first step to achieve enlightenment begins even before the path of initiation is trod. Simply to be aware of thoughts, emotions and actions, enables the aspirant or disciple to be vigilant, observant and to know. This helps build the purified etheric body while transmuting the grey matter of the brain.

The enlightenment that comes from the Third initiation of Transfiguration is a stabilized continuity of consciousness. Siddhartha and Jesus experienced a high stage enlightenment after much preparation. Through meditation and focussed will, they removed the veils of ignorance and contacted the divine light of Oneness. That which appears to be separate is nothing but an illusion and those who follow the path of separateness, controlled by their desires, will suffer. In their lives, Gautama and Jesus having attained, expressed compassion and taught. In following Their footsteps with the same concentrated vitality of will that the disciple sets in motion the movement towards enlightened Being.

Where one's being is illumined by the light of the whole, Beings, such as the Buddha, Christ and Masters can move freely into realms of higher harmony, and forms of divine service that are beyond the comprehension of even the highest initiates. Enlightenment is not easily recognized in others and it is very difficult to describe with words what enlightenment is. Buddha simply describe it as being awake. The Law of Enlightenment states that all is Energy, Light, supernal energy, Consciousness. It states that to be transfigured by the light of divinity is to become a force for transfiguration in the world. Just as love is the energy of the Kingdom of Souls, "unfettered enlightenment" is the energy of Shamballa. When the Law of Love is fully understood and coursing through one's veins, it confers upon one the right to be an agent for the forces of enlightenment. The Christ and Buddha are such divine agents. The lotus is the symbol for this law. The meaning of the lotus recitation: "Om Mane Padme Hume" is "hail the jewel in the lotus"—enlightenment arising within the lotus of human consciousness.

In relation to the "Shift" mentioned in Part I, there is a fine distinction regarding "transition of consciousness" and "continuity of consciousness". It is not the death experience. For those human souls who can maintain their inner equilibrium despite the outer chaos of the world will find that the passage will seem continuous to the degree in which a higher state of consciousness has been achieved. Another words, the transition or shift will be experienced at various levels of consciousness, from fully conscious, to that of a deep meditative like state, to semi-conscious and to unconscious. But, regardless, all the souls who cross the threshold will find themselves in a more light-filled earth. For those not quite as prepared, the apparent chaos will settle naturally as one's vibration stabilizes and acclimatizes. to the new. For those who are prepared or have developed a degree of continuity of consciousness it will be neither traumatic nor unfamiliar, but a continuation of the kind of subtle experiences already known to intuitive souls.

As mentioned, for others the journey will be traumatic, as material plane reference points will increasingly fade away, but in the new earth there will be many healers to attend to the those who will be challenged with acclimatizing. The new Earth will be a place where more etheric forms for human beings and the species comprising other kingdoms reflecting a higher state and plane of awareness, will exist. This passage of ascent which is unprecedented in Earth's history involves a dual transformation, that of consciousness and form.

For the majority of those passing through the veil, the journey in consciousness (with eyes open) will have barely

begun. The ranks will be filled with people of goodwill along with aspirants on the path to higher consciousness, disciples, and others. During this 'pull' through the portal, all will experience a quickening of change, internal and external. Those who remain identified with dense form will suffer from its loss. Learning to let go of old forms and identities comprised of matter is the way to mitigate the coming challenges of the shift.

With every expansion of awareness and every act of loving service, the light within the atoms and cells of the body grows brighter. For people aligned with the stream of evolution, the passage between worlds will seem to take place as if in a fleeting moment. If you are headed toward the New Jerusalem, the 'City on the Hill,' the place of the silent, peaceful will of God, you need only be concerned with finding the resonant point of entry within the Self that spans the worlds. This point of entry is the soul. There will be no bells or sirens to announce the crossing, only an awareness that the material stage of evolution has outlived its usefulness within the evolutionary design and that Earth is entering a new cycle. Everyone who intuitively senses the approach of a new Earth will feel a growing, glowing sense of anticipation. Fear will diminish with the realization that humanity is nearing the gates of the city of peace that will "descend from the clouds." If you take those words as metaphor, you will understand the vision of John the Disciple who wrote them down 2,000 years ago.

All planetary life-forms exist within specific vibratory frequencies. Consciousness and each range of frequency determines a distinct bandwidth of experience. As the law

states, consciousness precedes form and through expansions of consciousness or initiations, continuity of consciousness is created. The materialization of a new Earth will involve the convergence of ascending and descending waves of consciousness: human souls expanding in consciousness toward the Light will evoke the descent of the spiritual kingdom on Earth. This process will allow for the continuity of life in subtler form and the evolution of all lives on higher planes of existence — the promise of the Law of Enlightenment.

## **16 LAW OF HIERARCHY OR CO-CREATION**

This law is privy to a great reservoir of power and those highest manifestations of Love, Truth and Beauty. It is the law which governs all spiritual Hierarchies—planetary, systemic and cosmic. Earth's spiritual Hierarchy is composed of Initiates and Masters that were once incarnate human beings. Co-creation means collaborating with Cosmic Will and the Divine Plan. Incarnate human souls have within them all the creativeness and power endowed by the Creator of All to become Co-creators.

Closely connected to the Law of Love and the Law of Service, this law will be more dominant as the soul of humanity awakens to right understanding of a planetary spiritual Hierarchy and accepts the fact of a kingdom of enlightened government and leadership. The fulfillment of the Logosic Will is the purpose of Hierarchical life. This may involve spiritual Hierarchies working on collaborative levels with other resonant Beings from other planets or star systems within the cosmos.

A redefining and liberating of the word 'Hierarchy' is sorely needed. Earthly organizational structures are excessively layered and autocratically managed because they do not operate with Love and Truth. Imagine a ladder and each rung representing a stage in the evolution of consciousness. The cosmic principle of Hierarchy forms chains of connection between lower dense physical and refined higher levels of consciousness. The Earth's inner government is represented by the spiritual Hierarchy, functioning and in process of externalizing. As evolution proceeds, illumination flowing from the spiritual Hierarchy will transform human consciousness and all of life on Earth.

Hierarchy is all pervasive. The Secret Doctrine states: "Spirit is Matter at its highest rate of vibration and Matter is Spirit at its lowest". This is the Unity of Life in all its expressions and Hierarchy works out the evolutionary Plan of the Creator of All. On the rung of the ladder, called physical earth life in which human beings live, organized systems have produced a distorted form of hierarchy because human hierarchies are devoid of spiritual understanding. But, as soon as one steps on a higher rung of the consciousness ladder, one finds an organized body of 'Lives' cooperating in service to the Common Good. Co-creation with Hierarchical life and Divine Will is the plan for humanity. The recognition of Hierarchy is as equally important as the recognition of the Soul and the Plan.

Known as the Fifth Kingdom, the spiritual Hierarchy on earth is a reflection of the Great Lodge of the star Sirius. Stepping down the ladder of consciousness, the spiritual Hierarchy contains the blueprint for social structures of future human civilization patterned after Sirius. Truth states there is one Reality—the evolution of consciousness. When this is understood, it will be realized that human beings are destined to evolve, though spiritual enlightenment into a higher form of divine expression. The lack of enlightened awareness has kept humanity imprisoned in the human hierarchies of power and social systems. A spiritual hierarchy consists of lives of enlightened wisdom with various degrees of shared responsibility working together as a single body fulfilling Higher Will.

Evolution is guided by Hierarchy. The Law of Hierarchy is the guiding hand for all evolving expressions of life. One of the goals of the spiritual Hierarchy of Earth is cooperating with the other planetary Hierarchies of the solar system for the

fulfillment of Logoic Will.

The great ladder of Hierarchy within the chain of Life is vast and consists of countless lesser hierarchies of light. Every planetary Hierarchy works directly with great representatives of the Devic Kingdom and the Planetary Logos, the great Being that ensouls and guides the development of the planet. The life of a Planetary Logos is an expression of great compassion and sacrifice where the engagement of Higher Beings with Lesser Beings plays out, moving creation along its path of evolutionary unfoldment. A primary role of all the planetary spiritual Hierarchies also is the fulfillment of the Will of the Solar Logos, that great Being responsible for the evolution of the solar system.

The expressed objective of the Will of our Solar Logos is threefold:

1. development of consciousness.
2. refinement of form (consciousness precedes and conditions form).
3. intensification of realized life.

All Hierarchies of Light and Love are governed by Truth and spiritual law in the working out of Logoic Will. Life-Spirit is highly creative and free (within law) in its work of expressing what needs to be expressed within the worlds of form. In striving towards consonance with the Higher Powers and fulfill Higher Will, the great Law of Hierarchy is fulfilled. This is the result of the all pervading impulse of Love. Only through love, purity and unity can the power of this law be used for good. Spiritually, Hierarchy is simply a word for united labor, Brotherhood, an affirmation of common labor in

in the name of manifested Good, in which each co-worker is a part of the whole and identified with the whole. Advancement is only through common labor and conscious cooperation as governed by the Law of Co-Creation—there is no other measure! In the ways of the higher laws, none can bring about advancement of the individuality unless united labor be for others — as selflessness, pure as the Self.

In the new earth, "From the spiritual Hierarchy's side the process, Co-creation involves a narrowing of the flow of descending energy into a funnel that feeds into the upward-ascending channel built by disciples. They evoke knowledge from Us and we respond by transmitting, through etheric substance, ideas that are useful to disseminate in a given period. There is a distorted idea that human beings can act as divine co-creators with one another. Among human beings, cooperation is possible. Only when human beings work in conscious cooperation with the Kingdom of Souls is Co-creation or Co-authorship possible. Its purpose is to bring ideas and impulses of divine origin into the awareness of the human race." -[www.whentheoulawakens.org](http://www.whentheoulawakens.org) (see Cosmic Whisperings: New Human Beings)

This law requires accepting that which is Highest. The Law of Hierarchy or Co-creation is a central law that supports the advancement of all evolution. Striving towards the Highest fulfills this great law of the universe.

\* \* \*

## 17 **LAW OF POLARITY**

This law works closely with the Laws of Electricity and is important in the study of force or energy in man and in groups, and to interpret the human family in terms of electrical phenomena, positive and negative charges. "Original Sin" (a religious interpretation) is merely the separation of Unity into Duality and only considered evil when judged objectively. Through the eye of the soul, opposites are simply complementary aspects whose merging makes for Unity, just as in physics the superimposed colors of red and green light, result in the colorless. For the human being with cerebral consciousness, polarity is necessary in order for the brain to discern the objective world of nature.

The essence of this law is beyond rational analysis, but not so to the soul which is closer to the one single unique source of energy that binds all things. Everything in manifestation is dual and has poles, remembering that every thing arose from within the one cosmic source of energy. "The polarity of a man, of a group and of a conger of groups, the polarity of planets and their relationship to each other and to the Sun, the polarity of the solar system and its relationship to other systems, the polarity of one plane to another, and of one principle to another, the polarity of subtler vehicles, and the scientific application of the laws of electricity to the totality of existence on the physical plane will bring about a revolution upon the planet second only to that effected at the time of individualization."<sup>40</sup>

Polarity is behind the universal sex impulse. Everything has positive or negative polarity. Without the law of polarity, light, gravity and electricity would not be possible. On the mental plane, this principle manifests itself in the psyche of

each person as the enlightened or dark mind. Without duality, there could be no discernment or conscience. Perfectly maintained discrimination, the power to negate allows the soul to overcome the bondage of the personality. Liberation or freedom from the three worlds and rebirth is based on the power to recognize the not-self and realization of the essential Oneness of Reality. The duality of nature is the result of the scission of unity into the many complementary polarities. Evolution results from the passing of complementary opposites of non-equilibrated poles to perfect equilibrium through all the stages and nuances that the greater universe passes through. Nothing in the Universe that is perceptible is so of itself. Everything has its opposite, it's complement. As long as thought is founded on this duality, truth is relative.

Invariable Truth is the equating of consciousness with Being — what the Tibetan Master DK calls: "Identification", the best word possible describing an absorption into the Unity of the Whole, without loss of conscious individuality. It is a higher type of spiritual recognition which supersedes soul consciousness, only understood at the fourth initiation.

The full Delphic maxim exhorted by Pythagoras: "Know Thyself Self-Know the Self-Know the One" leads to freedom, through self-knowledge as a personality, then as a living soul and finally as a divine soul. To know the Self is to know the universe as it is, a phenomena of polarity permeated by an immutable absolute Unity and Mystery. "The irreducible One possesses a double nature, and this double nature, which is passive and active respectively, must manifest itself. The irreducible one is equally Feminine and Masculine in its absolute nature and exists as such in potentiality only, but its manifest nature is not androgynous. The action of a polarization is the fact of a scission. The One is recognized by its

double nature to be Two. The Uncaused, Causal One manifests and becomes the Two, a new unity which is reducible. Such is the manifested nature of the Irreducible One."<sup>41</sup> This truth echoes the Ancient Egyptians teaching in the study of man called the principle of *Anthropocosmos*.<sup>42</sup> In it one catches glimpses of the manifested nature of God and the true nature of reality leading to a freedom from mental constructs and entry into a livingness of unity which exists between the microcosm and the macrocosm—identification with the whole.

Polarity or Duality is in itself divine, a principle of Nature but in the case of humanity it is another matter entirely. "The light of living discipleship is a result of the persona extricating itself from the state of duality consciousness and everything separative in nature. It is by removing blockages to a state of enlightenment or Unity of the Whole that one comes to identify with the monad—the pure spark of the divine flame that is the will that has driven the journey of involution into matter and is driving the evolutionary return to Spirit."<sup>43</sup> Duality is not really opposites but in reality a scale of types from one extreme to its apparent opposite extreme, coexisting within a greater whole that encompasses both. To the soul, extreme positions are to the unawakened consciousness simply illusion. The brain-mind separates the elements of these extreme positions into opposing parts. In the soul infused brain-mind, when we are aligned with the spiritual presence of the Soul, an intuitive vision is gained of the unity and synthesis of all life, while clearly seeing the illusion of separation and its purpose in the evolution of consciousness. The principle of Polarity makes possible the choices we make on the scale of life between good and evil, right and wrong, generosity and greed, love and fear, truth and lies. The law of cause and effect is also

closely connected to polarity and holds us true to the choices and actions we make by returning to us what we have measured out to others. Like the swing of the pendulum, it always returns where it began.

In biblical terms it is expressed as, "Whatsoever a man sows, so shall he reap." "Do unto others, as you would have them do unto you." This principle establishes the dual aspect of reality. "Everything that is, has its double." Positive and negative, light and darkness, hot and cold, Love and fear, mortality and Immortality. The apparent mystery of polarity is faced by every initiate. It is a divine mystery, the truth of which is revealed at the Fourth Initiation in the perfecting of consciousness.

Words from an Elder Brother:

*"Thou who read life  
mostly read it as black and white.  
The imprint of mind says it to be so.*

*Blessed is the one who does not  
submit to the Law of Duality,  
but honors all Laws of the Universe.*

*There are many shades of grey  
between light and dark.  
But blessed is the one who finds  
the middle road of neutrality."*

-Petal #31, *Petals of Kuthumi's Rose*  
Vol. I, 1995 by Crea Lynn  
(out of print, contact author for additional info)

## 18 LAWS OF ELECTRICITY

One of the many laws which is plural due to the truth that there is nothing in manifestation but electricity with its many manifestations, as referred to by H.P.B. in *The Secret Doctrine*. Everything in the Cosmos is electrical or dual in nature but expresses as a trinity in manifestation. Life itself is electricity, but all that we have contacted and used today is that which is only physical and related to and inherent in the physicality of form. As mentioned in the Law of Polarity, pure primordial electricity takes many forms of life. The electrical unit or phenomenon of electricity which we call the fourth or human kingdom in nature, expresses the "fire by friction" nature of electricity. The Soul expresses its "solar fire" nature and the Monad expresses its pure "electric fire" nature. Another term for Electricity used in ageless wisdom teachings is Cosmic Fire. The essence of every human being is a fiery or electric essence. A Logos is the embodiment of electric fire, a Soul is the embodiment of solar fire and a Personality is the embodiment of fire by friction. All in creation not only is dual but also trine in nature, made of all three fires at different stages of manifestation depending on consciousness. In the evolutionary path of consciousness, the trine nature must be blended and the dual nature resolved back to Unity. This is the cosmic roadmap consciousness takes on the upward arc of evolution.

The combustion engine and burning of fossil fuels is an example of fire by friction. Through the unfolding of soul consciousness, fire by friction blends with solar fire. As the fire by friction consciousness of the personality dies out and solar fire of the soul takes its place, the burning of fossil fuels will be replaced by new sources of energy reflecting the relationship with higher forms of solar and cosmic fire in

consciousness. Earth's fire by friction civilization is now ending to be replaced by a planetary civilization of living souls on a higher plane of substance called etheric. This is manifesting through every heart that is aligned with the soul. It has been stated by many teachers and many books that the Christ upon His reappearance will restore the Mysteries to humanity lost due to dense physical materialism—the Mystery of Electricity being one of three great Mysteries to be revealed. In order to live safely and in harmony with the new energies of etheric matter, the Laws of Electricity must be understood.

The Laws of Electricity concerns itself with energy, geometry and consciousness. There is cosmic electricity which is primordial light; the ever-present electrical energy; the higher propelling vital energy that forces the ceaseless destructive and formative power and is the synthesis of the many forms of electrical phenomena. This law is scientifically applied using the principle of triangulation at every Initiation. "Every initiate, presented to the Initiator, is accompanied by two of the Masters, who stand one on either side of him. The three of them together form a triangle which makes the work possible."<sup>44</sup> "In all these triangles, cosmic, systemic, and planetary, two points of the triangle represent each a different polarity, and one point represents the point of equilibrium, of synthesis or merging."<sup>45</sup>

The coming Science of Energy will be as different in the new era as the modern usages of electricity differ from the understanding of the Victorian scientist. "The electricity of substance, the electricity of form, and the electricity of Life itself must blend and meet before the true Man (whether Logos, or human being) becomes a divine creator.

Science is on the verge of discovering the source of free, clean limitless energy which powers the stars. When the consciousness of humanity reaches a certain threshold of illumination, it will be so, under the guidance of those who have mastered this law and know of the electricity of substance the electrical reality of Life itself. Only when the "jewel in the Lotus" is about to be revealed, or the third circle of petals of the egoic lotus is about to open up, does the initiate begin to have a realization of the true meaning of the word "Life" or spirit. The consciousness has to be fully awakened before he can ever understand that great energizing something of which the other types of energy are but expressions."<sup>46</sup>

Fire by friction is electricity animating the atoms of matter, or the substance of the dense physical solar system, and resulting in the spheroidal form of all manifestation; the innate heat of all spheres; differentiation of all atoms one from another which the periodic table of elements attest to.

Solar fire is electricity animating forms or congeries of atoms, and resulting in coherent groups; the spiritual radiation of light and love from all groups and the magnetic interaction of these groups; the synthesis of form and soul: love-wisdom. This second form of electricity is what this second of three solar systems will express.

Electric fire is electricity demonstrating as vitality or the will-to-be of God and manifests as: Synthesis, Life, Glory, Irreducible Unity and Peace. This will be the goal in the third solar system. This third form of electricity will become the

dominant factor in the third solar system in the far distant future and also when the third great Solar Mystery will be revealed. Life itself is electricity, say the texts of Tibetan Master DK and the name for this is the Will-to-Good or the divine purpose of Life working out through the consciousness of love. This is a clue to the Mystery of Electricity and this great Law.

\* \* \*

## **19 LAW OF ALTERNATION, CYCLES OR PERIODICITY**

All things happen according to a law of Alternation, Cycles or Periodicity. Consciousness evolves by alternation, accomplished through regeneration or renewal of the divine seed-form, by enlarging the instrument in manifestation for itself. Alternation, the swing of the pendulum is the mechanical image of livingness or life in action, in progression. In physics, the propagation of waves is a symbol of Life's alternating nature in the evolution of consciousness. Thus, alternation measures Time. The day expresses and recedes and again it expresses, again it recedes. Likewise, the night. Likewise full moon, new moon. Everything is an alternating function. It is the work of the sacred word AUM/OM, this word that causes an expression and an absorption. It expresses and then we come to know that it is there. When it does not express, normally we do not know it is there. Even if one is not aware of AUM/OM, that does not mean that AUM/OM is not there, until you, as a purified human being, a living soul realizes you are the word pulsating within you. As a scholarly mystic puts it: "Till the Word made flesh, be the Word made soul".<sup>47</sup> So it seems there is a non-existence and existence of the word for the observer but to itself it is always existing.

The sacred word AUM/OM, is the creative Logos and always exists whether one is conscious of it or not. Alternatingly, it expresses and then withdraws itself though the Law of Cycles. Therefore, it is always there and it is conscious of itself. It is not only conscious of others it is also conscious of itself. But, why all our effort or that of understanding the sacred word of God? Is it for personal satisfaction or a joyous heaven of restful peace? Divine love and truth says no. Why?

"The search in the world goes on; the cry of humanity rises from the depths and mounts to the very throne of God Himself. From the heart of the Temple of God, to which we may have fought and wrestled our way, we turn back and work on earth. We rest not in our endeavor till the last of the world's seekers has found his way home."<sup>48</sup> Seek to work for the good of the whole. This is the true message of the this great law and what impels our planetary Logos.

The world of nature exists within a larger pattern of cycles, such as day and night and the passing of the seasons. The seasons do not push one another. Neither do clouds race the wind across the sky. All things happen in good time. Everything has a time to rise, and a time to fall. Whatever rises, falls and whatever falls shall rise again. That is the principle of cycles.

Training for the aspirant or spiritual seeker will be cyclic, and will have its ebb and flow, as all else in nature. Aspirants and disciples must learn to work intelligently with the law of alternation and rhythm. Times of outer activity succeed times of inner rest or pralaya, and periods of registered contact alternate with periods of apparent silence. If the student develops as desired, each pralayic or rest period is succeeded by one of greater activity, and of more potent achievement. Rhythm, ebb and flow, and the measured beat of the pulsating life are ever the great law of the universe. In learning to respond to the vibration of the high Places, this rhythmic periodicity must be borne in mind.

This law "is connected to the basic law of cause and effect with the emphasis laid on character building and spiritual development as a foundation for the development of all the faculties inherent in the human being. By the requirement,

demanding of all affiliated pupils without exception, the life of inner unfoldment and development (through for example, meditation) should be paralleled by a life of exoteric service through action. By the graded expansions of consciousness that are the result of the imparted training; these lead the spiritual seeker on from step to step till contact is made with the higher self, the Master, the egoic group, the First Initiator, the One Paramount Initiator, until the initiate has entered into the bosom of his "Father Which is in Heaven."<sup>49</sup>

This great law governs all manifestation, whether it is the manifestation of a solar Logos through the medium of a solar system, or the manifestation of a soul through the medium of a body. The great Law of Cycles continually institutes the new and ends the old. This great law controls likewise in all the kingdoms of nature, yet the great Life of this law seeks to work in closest cooperation with souls for the good of the whole until the last pilgrim has found his way home. All the laws of the Creator are of divine selflessness.

Christ echoed this law in His injunction: "I am with you always, to the end of the age." and also when he said that He seeks greater things for us. His injunction flows from this great law of alternation as the Piscean Age ends and the Age of the Aquarius begins. For most of humanity, attaining this degree of convergence will require lifetimes, life cycles of experience. However, multiple streams or paths of ascent will occur simultaneously in the new world, each at its own pace of evolution. By the end of the astrological 'year' known as Aquarius, the Plan for humanity is that vast progress will have been made toward the convergence of streams at an omega point, an occurrence referred to as the "sacralization of Earth".<sup>50</sup>

## 20 LAWS OF UNIVERSAL HARMONICS

This law like the Laws of Electricity is plural as it works out differently depending on which plane of manifestation and dimension it is operating. It governs the harmonic unity of all forms and is a law which is natural to the devic kingdom and the soul, but not the lower mind of the human. It governs the archetypal patterns of Consciousness within Universal Mind upon which all etheric bodies are based, for **Form ever follows Consciousness**, providing the light geometry or etheric blueprint upon which the physical form is built. In all of Nature, consciousness ever determines the form. When we create or design using universal geometric harmonics, a resonance is set up so that the form acts as antenna for higher inter-dimensional energy, light, consciousness and vibration, antennas such as crystals that act as cosmic resonators, amplifying the resonance of spiritual energies.

This law will come into greater activity when the Fourth Ray of Harmony becomes active in 2025. Universal harmonics is one of the new sciences as the light for the soul unfolds in the world of human affairs. It will be a law indispensable to Art, Science, Architecture and Healing. It will facilitate cooperation with the Devic Kingdom. As group work for spiritual purposes becomes more established and Shamballa energy more capable by humanity of being absorbed, cooperation with the devic kingdom will be possible and the potentiality of this law utilized scientifically, safely and beneficially. To work harmoniously with the devic kingdom requires group consciousness, an intelligent understanding

of this law and its application. Through the broadening of consciousness along wise application of the new Sciences, such as the Science of Light, great changes will be brought about and new forms developed more in resonance with the fifth and higher dimensions of etheric existence. In the following, an Elder Brother, in response to a question, speaks of the new Cosmic Geometry—The Science of Light:

“You have asked what the new science will be to portray fourth and fifth dimensional geometric shapes, such as those that are found, for example, in sacred vortices around and within the earth? This new science will be simply called the Science of Light and will fall under the heading of Cosmic Geometry, in which the platonic solids and hybrid platonic solids plays only one part. Various light-geometry-resonance sciences such as holography, sacred geometry, crystal formation, sound harmonics, color and vibrational healing, symbols, soul fusion and in a more complicated setting vortex-based mathematics, to name a few, will all fall under this future science. The Science of Light will be the backbone of all study encompassing matter, force, energy, light as substance and its relationship to nature, the cosmos and the evolving consciousness of man.”<sup>51</sup>

In the evolutionary cycle of Aquarius, light will illuminate understanding, bringing wisdom, beauty and truth. Etheric light will be more visible and it will be light that will infuse all areas of life, evoking Great Ones from afar and of the Devic kingdom, Who along with the spiritual Hierarchy will work alongside humanity in the creation of a planetary civilization.

"At the heart of this Science of Light lies the Law of Balance, the golden divine ratio of phi, the decimal numbers of pi, and dynamic symmetry all having to do with cosmic consciousness, fractals, geometry, abstract mentalism and the higher dimensions. The divine universe was created by energy as a means to expand itself into matter. In metaphysical theory that was the very first act of balance... balancing spiritual energy to physical matter. So in essence one could say that balance is the key that unlocks the secrets of the universe."<sup>52</sup>

How will this law, in particular the Science of Light affect culture and technology? As the higher laws and sciences are better understood, the human perception of them will bring technology under the control of the soul and spirit. This will lead humanity to the recognition of higher aims and the affirmation of goals aligned with spiritual values. This regeneration of nature and the regenerated consciousness of the people will prompt new forms better suited to the structure of life in the new era. A recognition of this law and the Science of Light, even now helps to prepare the way.

It is known by people that the geometry of the five pointed star is employed by the Masters of the spiritual Hierarchy at the time of the full moon of Taurus in the Wesak Valley of the Himalayas, to commemorate the Buddha's enlightenment: "Hence we have the activity of the Buddha at the May Full Moon and that of the Christ at the following June Full Moon. Their united activity serves to bring about a much closer approach between the Lord of the World and the Hierarchy, via His four highly evolved "Great Lords": the Buddha, the Christ, the Manu, and the Maha Chohan—the five points of

energy which are creating the five-pointed star of Humanity at this time." -Bailey, Alice, A., Rays and Initiation, p. 90).

Of the many geometric shapes, the five pointed star stands out amongst shape energy in marvelous potency. This star has been the Christ's vehicle in the human family during the Piscean era. However, as we enter the Aquarian age and as the established rhythms of the old era are replaced by the new, it will take on greater significance. As evolution proceeds geometry will more readily be used by consciousness. The five pointed star has within it the "golden" proportion which will be one of the mathematical formulas used in giving perceived etheric energies expression. This will be done in conjunction with the unfolding of identity of the Self, in love, wisdom, truth, skill in service and through alignment with divine law. Form will be understood as providing the vehicle of expression for the Self and as consciousness evolves, forms will evolve that neither veil nor hide the Self, but will allow the nature of the Self to penetrate the form, revealing all the radiance of God, His power and magnetism; revealing all there is of form, of life, of beauty and of usefulness. This is the future that this law holds for humanity.

\* \* \*

## 21 LAW OF UNIVERSALITY

The Universe is the sum total of all things visible and invisible that fill infinite space. It is the Macrocosm permeated with life and energy. The Universe is the great whole, composed of all its parts. The human heart beats in a determined relationship with the systole and diastole numerically in accord with the heart of the universe. This is the pulse of love, pulsing through the universe in divine rhythm. It might be said that the Universe is another name for God for He identified himself as **“I am that I am** and beside me there is no other.” Yet, hard to fathom is its stage of evolution.

If the Sages speak of man (man here denotes humankind) as the microcosm, They are not speaking of it as opposed to the macrocosm. The microcosm, man is a manifestation, a stage of the macrocosm. The microcosm and macrocosm are in principle a synthesis, a unity and in functional organization one and the same thing. In reality, no time separates man, microcosm and the Universe. Microcosmic man's functional nature is to be universal and in consciousness: Cosmic Man. So long as a human being judges using the limited senses of time and space, there will be necessarily separation between large and small, whole and part, limited and universal, microcosm and macrocosm. If on the contrary, one judges with the consciousness of Being, all limits, all separation cease to exist.

The universe is the sum of all substance for out of it are all visible things formed. It is all Love, for it is bound together in a single system and operates as a single unit. Love is the integrity principle or the binding principle which preserves the universe as a unity and keeps all its operations moving in perfect harmony and regularity.

A human being in its true estate is always active, and is that through which God Principle works or comes into manifestation. As the Sages often put it: “Man projecting God; Man becoming God; the very Ideal of all Perfection; God selective but completely universal.” In the process of evolution a human being develops through thought choices entirely. The Sages know that man must make choices but also know that man is not aware of the Whole due to lack of development in consciousness of Being—that the unity of the whole lives within man. This means, of course, that man is never separated from his true Being or true origin. Every human being is its own determining factor and that factor is always absolutely one with Principle, never separated. This is an absolute and immutable truth.

As just stated a human being can never be a completely independent organism for it is inseparably united with the whole. How could she/he remove her/himself out of infinity? Only in ignorance. It is purely imaginary and illusory. The sages state: one only needs to rid oneself of the illusion of separation.

Man, the microcosm is king only in the sense that he has the free will and privilege of carrying out the laws of the kingdom, but any king who disregards the laws of his kingdom does not remain king for long. Kingship is subject to the laws of the kingdom just as are the subjects and they are all units in a single system with the law superseding at all times. Only through the binding influences of the law does a kingdom remain a harmonious unit.

It is always possible for a human being to improve one's consciousness to the point of becoming whole—the true undistorted thought in the Divine Right of Kings or Popes. It

was not for a king, pharaoh or a pope to put him/herself up as the only Divine Ruler, an earthly reflection of God. All of mankind should be Divine Rulers and rule as Kings, always with that expression of Love to "Never exalt oneself above another, but to exalt all." Selfishness destroys, Selflessness uplifts. True leadership arises from the sense of oneness with the whole and egotism arises from the sense of separation and selfishness. Therefore, egotism is the greatest violation of the law of universality and produces the most disastrous results, say the Sages.

If a human being understands itself as a soul with a physical body and is the universe in seed form, that person has something comprehensible, though not easily. Source or God is both the cause or seed and the finished product of that seed. Man as effect, is a soul that contains the seed to be transformed into the finished product. Cause is essentially the counterpart of the effect. Cause, Desire is life and must have its counterpart— form, effect. A human being is in essence Cosmic Man—the Anthropocosmos. Some people quite naturally ask that, if this be true, why did Jesus always say that "I am the Son of God," but never "I am God"? But this is only one of His statements. He said, "I and my Father are one." Then the translators, failing to understand Jesus' next sentence: "You are God as you present God, therefore I present God to you," left that completely out. Yet he said, "He that hath seen me hath seen the Father—God." (Life and Teachings of the Masters of the Far East by Baird T. Spalding)

It should be remembered also that the name "I am God" was the unspeakable name to the Ancients. The theory was that it was never to be made as an audible statement. Its utterances were in the silence and stillness of their own souls

and the only way it was ever to be voiced was in the natural radiation of love, perfection, and power that emanated from this inner stillness and silence. "The Father who seeth in secret shall reward thee openly" is the thought. Another meaning to the statement, "I am God," is, "I am Silent." The "I am Still", the silent witness, the soul within the nature of man. It is the name hidden within the name Jesus Christ, The God Self in perfect non-dual silence in the new manifestation or expression of Jesus Christ. True leadership acts from this Silence. "Be still! - and Know - I am God". All who seek to understand the Self must first learn to be still and allow the divine command to penetrate deeply the soul. In this omniscient oneness, perfection shines forth brilliantly and one knows as Jesus knew: "I am God and one with God's whole universe." (Life and Teachings/Spalding)

It was considered blasphemous to make this audible statement and the people of Christ's time construed His statements as inferring that the unutterable NAME was applied to himself. They condemned him by their own inference regarding his statements. But Jesus was true to the law and though many of His statements inferred the fact, he did not utter it. "Thou hast said," "I am," "He that hath seen me hath seen the Father," all infer this same fact but, whatever he may have said in his heart, it is never mentioned that he voiced the fact outwardly, "I am God."

There should be no distinction made between universal and individual man. One is the reflection of the other at different stages of consciousness. An example from geometry: How can a distinction be made between the circumference and the center of a sphere? If the distinction is made physically, the point is lost. Without a center there is no circle and without a circle there is no center. The circle and the center are one. One implies the other. This is where most of the

trouble has arisen. You cannot divide man. The One is irreducible. Man is One with God. "I and my Father are one" was Jesus' statement and He carried it still further when He said: "When you pray, pray to the Christ of God; include yourself as the Christ." The soul is the inner Christ. The Form, Soul, Christ and God are One.

The Sages do not talk of God and man. They are always one in their consideration. There is no separation whatsoever. There is no priest and a separate congregation. It is the congregation and the priest—all one. The Hierarchy of Light, the Forces of Light is One Body, One Mind, One Heart and see not any life as separate for there is not a unit of life that is separate from its divine source. Darwinian thought simply failed to carry human origin through to Principle. The very last statement of Darwin was: "Beyond this which we have built up still remains Principle, which is a mystery to us." There is no effect without a cause and it is impossible to understand the effect without consideration of the cause.

The Law of Universality holds that the Law of Rebirth is not necessary and can be transcended. If there is a light placed in the center of the room the best way to reach that light is to go straight to it. Why circle around it time after time? The teachings of the sages point to go directly to that light, pick it up and incorporate it, then one is through with all reincarnation and karma completely. It is only in the failure to go direct to the central point that the law of rebirth is in motion, though not easily done. The consciousness that accepts and realize the central fact of the soul, the inner Christ, arrives and all the going round and round will cease and come to an end.

Universality states there is both individual identity and

oneness simultaneously. The Universe is an assembly of universal units. So is every human being unto itself. All are one and the same, operating under the same harmonious conditions, expressing the synthetic whole as an individualized unit of wholeness according to one's state of consciousness. Always in harmony. Not differentiating from harmony but assembling in harmony. Ponder: "What does it mean to become the Path that transforms a human being into a being in resonance with the nature of Christ? What are you discovering about becoming a living soul? Who is Christ to a conscious soul? What is the relationship, of yourself to Christ, to the Cosmos?"<sup>53</sup>

This law emphasizes the eternal Unity of all things and the inseparable relationship which exists between God and man, the One and the Many. This point cannot be stressed too strongly for the illumined have always taught that there is not God and Man, there is only God. Man\* is a unit in and with the Infinite and, as such, contains within himself all the potentialities of Infinity and all of Infinity is accessible to him. Man is one in and with the Universe.

\*Throughout this presentation the term 'man' denotes the human family, human souls, units of consciousness. The word 'man' is derived from the Sanskrit word 'manas,' meaning mind. 'Manas' reflects the evolutionary advance of consciousness from the animal kingdom into the human kingdom and beyond, in which the faculties of mind have been developed, evolving from instinctual consciousness, then to mass consciousness, then to self consciousness, to soul consciousness, culminating in God consciousness.

## 22 **LAW OF SACRIFICE OR GIVING**

### **FIRST LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

This is the first Law of Soul Life and is a dominant world law that has been gravely misinterpreted by religions. It does not deal with divine sacrifice as a means of salvation. It is not the means to but the urge, the divine impulse to salvation. It deals with giving and is connected to group love, group understanding, group relations and group conduct. It governs the appearing and the disappearing of universes, of solar systems, of races and of nations, of world leaders and world rulers, of incarnating human beings and of revealing Sons of God. It is the expression of a divine impulse, that of giving.

The whole secret of the doctrines of "the forgiveness of sins" and of the "at-onement" lies hid in the simple word: *giving*. It is the basis of the Christian doctrine of love and sacrifice. It is the instinct in the human being towards that which lies beyond dualities, the stage of essential oneness—"at-onement". Hence the emphasis laid, in the Piscean Age and through the influence of Christianity, upon just these two things, — forgiveness and atonement.

The idea that a sole people benefit from sacrifice and death of the great Son of God, and who pass, due to the merits of that vicarious death, into a state of bliss in heaven, simply because of an emotional choice, which ignores millions of those who have made no such choice, nor had the opportunity to do so is a distorted misrepresentation of the truth.

Giving should not be confused with surrender in terms of

understanding this law. Surrender has its place in the life of the spiritually awakened. Surrender is about living your life as a soul and so when you live from this place within yourself then struggle ceases because you know that things are always unfolding in the right direction. When surrender is to a principle or energy such as that of Shamballa or the Will of God for the purpose of leading humanity into "fields" of peace then surrender becomes inclusive and giving in the truest sense of the word.

When group consciousness or the soul nature is carefully studied, the meaning of sacrifice and of death will come into their rightful place in the human consciousness, and the Law of Giving, with all that it entails will be correctly understood and applied. When the Law of Sacrifice or Giving is rightly understood the evocation of group consciousness will be rightly understood. The manifestation of any form through the sacrifice or giving of some life, in order that the evolving life may progress, is one of the fundamental methods in evolution.

The Christ chose to be crucified upon the cross of matter, and by that great sacrifice opportunity was offered to all evolving lives in all kingdoms of nature. Humanity owes its progress to sacrifice. This is crucifixion, a basic premise of all group work, the governing principle which results in each human unit moving from self-consciousness to group consciousness and eventually becoming a world server. We owe all of our progress to the great law of sacrifice and the sacrifice of Great Lives. It is also known as the "Law of those who choose to die." Not death as humanity understands it, but those who choose to give freely and unconditionally of their life in service to God, to other souls and to other forms of life in other kingdoms that they too may evolve.

"This spirit of sacrifice is ever found when the Shamballa force [the livingness of divine will as emanating from Shamballa] is rightly contacted, even in the smallest degree, and the underlying impulse behind the loving will of God is sensed and understood, accompanied as this always is with the desire to participate in that will and its spirit of divine sacrifice."<sup>54</sup> Jesus said: "not my will, but thine [divine purpose] be done. (Mathew 6:10, author-brackets)

Manifestation is itself the Great For-Giveness. Stupendous Lives, outside manifested existence came into manifestation in order to give Themselves for the lesser lives and forms of existence that these lesser lives might be enabled to proceed onward towards high places of spiritual expression. Achievement is ever followed by sacrifice and the giving of the greater for the lesser. Such is the note and theme of the entire creative process and is the basic meaning of the phrase, "God is Love," for love signifies giving and sacrifice for this solar system. The symbol is a rosy cross with a golden bird hovering above it. The ray energy is the out-pouring 4th ray of Harmony through Conflict or Ordered Chaos, an at-one-ing harmonizing factor and also the reason why sacrifice is blended with pain and sorrow. The planets Earth, Mars, Saturn and Pluto share this condition. It is interesting to note that the higher laws are administered with the help of planetary Lives. For example, "Jupiter is responsible for giving the Law, while Saturn enables its manifestation."<sup>55</sup>

Christ's appearance two thousand years ago symbolized the "Word made flesh be the Word made whole"—the sacrifice of that which is lower in order to release that which is higher and simultaneously the sacrifice of that which is higher in order to uplift that which is lower. This law is in reality the expression of the statement "God is Love" made earlier,

leading to a defined activity, with its consequent and subsequent results and effects. It is this urge to sacrifice as opposed to winning or gaining for one's self that holds the whole clue to the unfoldment of the human soul. It is an urge different than desire academically understood. It connotes the emergence of that which is most divine in the human being. It not a desire connected with feeling or sensuousness. It is the predominant characteristic activity of inner divinity, dynamic and active. Through the God of this planet, the urge to salvage and redeem works out as pain and sorrow and is a clue to the temperament, attitude and orientation of that of a "Divine Rebel". The units of divine life passing through the planets of pain and rebellion acquire a psychic sensitivity and tenderizing of the heart otherwise impossible, for a reasons known to our Planetary Logos as all unfolds according to divine law. This has lead to a stage in the consciousness of earth humanity where that which lies behind the pain and suffering of dualities—the soul, essential oneness, is being recognised.

The Law of Sacrifice underlies all the evolutionary processes. In the undeveloped sacrificial instinct it drives humanity forward into its wild struggle for material well-being. In the more developed of the human family it is seen as philanthropy, the instinct to betterment, the urge to progress, the effort to ameliorate conditions and the sense of responsibility which makes people realize that they are their brother's keeper. All these are expressions of this sacrificial instinct which is the expression of a still greater factor in the creative process.

The Law of Sacrifice is the major determining impulse which impelled the Soul of God Himself to enter into form life; which impels life, upon the involutionary arc, to progress down into

matter, producing thus the immanence of God. This Law also means the relinquishing of gain for self in terms of the human being and as mentioned earlier the relinquishing of the personality to the soul and the performance of selfless action. This is a law which works out in many ways and embodies the major lessons of every disciple. At the third initiation, this law dominates the life. It represents a willingness to sacrifice all personality desires in support of divine Will as sensed through the soul.

It may be a difficult law to embrace but only if the personality remains selfish and resists evolutionary impulses. It is the law that frees and thus the symbol of a rosy cross with a bird flying over it. The Law of Sacrifice is what guides that quality of service in which there is selfless action for the greater good. If there is passivity on the part of humanity, that is if humanity just sits arounds and waits for the externalization of the Christ and spiritual Hierarchy to occur, the event is delayed, because humanity has a giving part to play in planetary evolution. On the other hand, conscious self sacrifice on the part of humanity brings about the needed conjunction of 4th and 5th kingdoms forces for Hierarchy's externalization and Christ's return. It is conformance to this law which creates what spiritual Elders call a "welcoming vibration" within humanity. The incorporation of this law by groups will result in fluid cooperation, complete understanding and oneness of approach, creating a planetary civilization. A planetary civilization based on an inner contact and relationship with Divine Will (Shamballa), flowing from a realized oneness of purpose and spiritual love. Truly, such a soul centered civilization is worth striving towards.

## **23      LAW OF MAGNETIC IMPULSE OR POLAR UNION**

### **SECOND LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

**This is the second law of Soul Life.** Also known as the first step towards spiritual marriage, or the Law of Polar Union. It deals with the primary realizations by any unit of consciousness, be it an atom or a human being, of its environing contacts or groups. It is a sensitivity born out of a sense of affinity by that unit that eventually leads to a relation between the unit and the group. Again, this requires a degree of soul or group consciousness on the part of the unit.

It results in an eventual union between the part and the group producing harmonious group relations. For those on the path of discipleship, its symbol is two fiery spheres united by a triangle of fire, thus picturing the triple interplay between all atomic structures and the magnetic linking of certain centers in the etheric body. Through a right understanding of this law, a person arrives at a knowledge and realization of the subjective soul life and becomes better equipped or goal-fitted to work in coordination with others, in form and with form.

Life in the new earth of etheric-physical substance will allow purpose of a given life cycle to become more accessible. As the soul's purpose becomes more readily known, the law of attraction and laws of soul life will be the main orchestrators of individuals and groups with the goal of establishing highly refined and ordered units of group activity, large and small, who have accepted responsibility for carrying out portions of the Plan.

Through a right understanding of this law, a disciple works consciously in form while remaining polarized in consciousness to the higher etheric planes of the soul and Kingdom of Souls. This is not the same thing as making sense contacts, as the relation established is between the higher self or soul in groups and not between aspects of the lower self or personality. It is spiritual marriage in the true sense of the word, etheric union on Soul and Buddhic levels. It is not individual union between the inner christ or soul and its outer personality which is continuing to unfold within members of the group.

This law concerns those inner esoteric activities which are not primarily related to form life but to soul life functioning behind the scenes, such as group cohesion, unity of purpose, etc. It is the law which governs the relation, the interplay, the inter-activity and the inter connections between groups of souls on the higher etheric levels of the mental plane. On the plane of the soul, there is no "my soul and thy soul". In its widest scope, this law concerns the inter-relation of all human souls within the periphery of what is called the Kingdom of liberated or enlightened Souls—the spiritual Hierarchy. Separation only exists in the worlds of illusion, periphery being emphasized.

Closely related to the Law of Attraction or Law of Love, this law works in the soul realm, the world of cause rather than the world of phenomena or effect. Just as the Law of Attraction, working on the physical plane, brings together men and women into one group effort, so the Law of Magnetic Impulse can begin to control when, again as a group and only as a group, they unitedly constitute themselves as channels for service in pure self-forgetful

spiritual livingness to Higher Will. The law governs the magnetic impulsive interplay between souls and groups of souls in form and out of form. Just as through purification, meditation and service an individual has made soul contact and is an expression of soul energy, so groups of souls will be in resonance with higher sources of spiritual supply—Greater Lives and Forces of Light. This law extends into the far reaches of consciousness, space and time. The observations recently by scientists in the merging of galaxies which are seeking union is a good analogy for the Law of Attraction and Polar Union.

Only through the working out of this law can higher energies of Life be safely transmitted into the three lower kingdoms of earth. Group union is not alignment with a Master's group or fusion with one's inner band of disciples. It is a union of a greater and more vital thing because it is an achieved group union between two Kingdoms. This will be the goal for discipleship groups formed for purposes of working out the Plan in the new era.

Group union means a fusion between fourth kingdom groups and the Fifth or spiritual kingdom of souls, so that higher Forces of Light can be channeled into the world. It is this great task placed before living discipleship groups. As spiritually oriented group work becomes more widespread and their activity ordered, this law will come into greater activity and a greater understanding will unfold regarding the interplay between the human kingdom as mediator between the soul life of the three subhuman kingdoms and that of Kingdom of Souls or the spiritual Hierarchy. This relationship will result in great invocative potency.

This magnificent and magnetic interplay offers food for thought and indicates the way of group and of individual service. The symbol for the Law of Polar Union is the originator of the sign for Libra — Balance, Service and in the new era spiritual balance is the next great objective concurrent with soul unfoldment. This, the Christ and His Instructors will guide humanity in.

Owing to the major part which humanity has to play in the great scheme or Plan of God, this law will be the determining law of the race. This will not, however, be the case until the majority of human beings understand something of what it means to function as souls. Then, under free choice to support this law, humanity will act as a transmitter of light, energy and spiritual potency to the subhuman kingdoms, and will constitute a channel of communication between "that which is above and that which is below". Such is humanity's high destiny.

Groups of souls that have formed, in resonance with the source of spiritual supply and the spiritual realities of the soul, having stabilized the contact, make possible contact with greater Lives and Forces of Light and Life. The aggregated aspiration, consecration and intelligent commitment of the group carries the individuals of which it is composed to greater heights than would be possible alone. The group stimulation and the united effort sweep the entire group to an intensity of realization that would otherwise be impossible.

This thought embodies the opportunity immediately before all groups of aspirants, disciples and allied men and women

of good will. If at the time of the May full moon they work together as a group of souls, they can accomplish much when great potencies of light, love and spiritual power pour into the planet.

This thought illustrates also the significance of this law which produces polar union between kingdoms. What is needed to be grasped is that in this work, there is no personal ambition implied (even of a spiritual nature) and no personal union sought. This is not the mystical union of the scriptures or of the mystical tradition. To reiterate due to its importance, it is not alignment and union with a Master's group or fusion with one's inner band of pledged disciples, nor even with one's own Soul. All these factors constitute preliminary implications and are of an individual application. This union is a greater and more vital thing because it is a union of groups, kingdoms, solar systems, galaxies and universes. It will make of the earth, a sacred planet and humanity in the new era, citizens of the Cosmos.

\* \* \*

## 24 **LAW OF SERVICE**

### **THIRD LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

This is the third Law of Soul Life. The law of service grows naturally out of the successful application of the Science of the Antahkarana and the Science of Meditation, both under the greater Science of Light. It will be the law governing soul activity and in the new era, humanity will come to understand this law as a science as well as an extension of what Christ expressed two thousand years ago. Only when love finds its outlet in service can the human soul begin to measure up to the spiritual potential innate yet unexpressed. This law is a part of the Law of Hierarchy where each selfless action forms a chain of connection to the Highest Realms and produces a corresponding activity in the personal life, in the activity the Masters call Service. Therein lies the growth through the service of the race, and through a blending of human consciousness with the inflowing grace of spiritual realms of consecrated light, love and will.

Service is the true science of creation and is a scientific method of establishing continuity. In each hierarchical unit consecrated service provides the continuity and link in the great chain of Being. Another term for this law is the law of water and of fishes, water representing the "waters of life" which the World Savior was, so that men and women (fishes) could drink the needed "living waters" of the spirit. The symbol is a pitcher on the head of a man who stands in the form of a cross. The Aquarian zodiacal sign with a pitcher of water on the shoulders signifies burden, while the man standing perfectly balanced with the pitcher on the head indicates poise, equilibrium and balance. For this balance, the (second law of soul life) Law of Magnetic

Impulse is preparing groups through the union of polar opposites. The Law of Service is the governing factor in the age of Aquarius of all soul activity where illumined thinking, the needs of the group and the goal of world service take the place of self-interest, personal ambition and kama-manas, a Sanskrit term for emotional idealism. The ray energy is the outpouring energy of the 6th ray, a vivifying factor of devotion and idealism and when expressing through the developed human soul brings about service illumined by the light of love. A few notes of caution: if after acceptance of responsibility of working within a Master's group, if the evasion of this law is a conscious action, there are karmic consequences. Ashramic work requires much sacrifice of time and personal interest, requiring deliberate effort, conscious wisdom and the ability to work without attachment and without interfering in the individual rights of people.

True service, humanity will come to understand is not easy and requires hard work, but when it is rendered with a pure heart, the living substance of the soul infuses the service. Service is not to be looked at as something disciples have to do, but love to do joyously because of right motive behind it. Service, defined as the spontaneous effect of soul contact is then rendered as the Masters render it and as the Christ demonstrated it for humanity. True spiritual service is not a method of world salvaging but a life demonstration. It is the evolutionary impetus of the soul.

The soul's inner urge is to serve higher will and when contacted by the personality produces service in the outer world. Service therefore cannot be taught. It is the natural outgrowth of soul contact. Service is a creative impulse and also the outer expression of the inner subjective life of the

soul. It will be demonstrated that service has a transformational effect on the three lower vehicles. "Service is not simply an activity of some person or group doing something with good intention for another person or group. Service itself is definitely the result of a tremendous inner happening, and when that result is brought about, it will be found to have produced a number of creative secondary causes. These are, primarily, a change in the lower consciousness, a tendency to turn away from the things of the personal self to the larger issues of the group, a reorientation which is real and expressive and a power to change conditions (through creative activity) which is the demonstration of something dynamically new.

As this inner event stabilizes into an equilibrated inner condition, the demonstration of the above changes becomes more regular and less spasmodic and the effects of the new forces flowing into the personality to be later used creatively, will be seen in all three bodies. Thus the true server comes into possession of his instruments for service, and thenceforth creative work in accordance with the Plan can go forward on all three planes. Thus has God, in His wisdom, chosen to limit Himself, and the work of evolution proceeds solely through the medium of self-chosen builders and under the direction—on this planet—of those men whose lives are being transformed through soul contact and creative service, and who constitute the planetary Hierarchy."<sup>56</sup>

As in the symbol mentioned earlier, the human being begins to stand in spiritual being and lives a life of service regardless of the pain and suffering. The reward is a strengthening of the flow of life, a growing sense of joy and a greater unfolding of the Plan. God chose to divinely limit

Himself regarding the Law of Service, if such a self-imposed limitation can be imagined. It must be remembered that "The synthesis of the divine concept, the vision of its structural outline and the plan for its materialization—these are the factors which govern souls on their plane, condition their activity, and, within the limits wherein they work, are the factors which (in time and space) condition and limit Deity, for such is His divine Will."<sup>57</sup>

There are as many ways to serve as there are souls. There is no one way or no right way to serve. Each server (establishing soul contact) must be left to serve as seems best to them and when in group relations must have the capacity to work with others subjectively, telepathically and synthetically. As long as one is a pure vehicle for soul life to flow through and into the world, true service will demonstrate in beauty unique to the one that serves. One could say that Service is a continuous state of mind.

A new cycle of service is dawning with the Aquarian Age in which the spiritual consciousness is awakening with its responsibilities and a realization of the place the creative service of the soul has in the scheme of God's Divine Plan. "In this work many can have a part. The Law of Service has been thus outlined in an endeavor to make one of the most esoteric influences in the solar system somewhat clearer in our minds. I call you to service, but would remind you that the service discussed here will only be possible when we have a clearer vision of the goal of meditation, and learn to preserve, during the day, the attitude of inner spiritual orientation. As we learn to detach in our consciousness from ourselves as the central figure in our life drama, then and then only can we measure up to our real potentialities as servers of the Plan."<sup>58</sup>

## **25 LAW OF REPULSE**

### **FOURTH LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

This is the fourth Law of Soul Life. This is also known as the Law of All Destroying Angels, and its symbol is an angel with a flaming sword, turning in all directions. It is the Angel guarding the treasure, driving man forth in search of another way of entrance, thus forcing him through the cycle of rebirth until he finds the portal of initiation. Angels know the treasure must be carefully guarded. The ray energy is the rejecting energy of the First ray, a dispersing factor. It functions to spur the seeker on and inspires through the demonstration of the power of Love-Wisdom. It is a first ray energy in that it works through the first sub ray of the Second ray of Love-Wisdom (the Ray of the solar system) using spiritual love to repulse that which is undesirable to the higher self, the true man. It rejects until that which the heart craves is found. The why and how of this law may appear puzzling but it places emphasis on the value of impediments and a fiery heart. Paintings and sculptures depict Christ with a fiery heart, one who exemplified this power.

Unless a thread of light exists to act as a channel, some soul contact, some measure of soul force, the activity of this law will not be registered and what this law can convey to the intelligence remains unknown, unrealized and useless. The first three soul life laws just imparted deal with the stage wherein the soul is gaining control of the personality. This law's full force is felt after the Third Initiation—when the soul has control over the mental body, the personality is a pure vehicle for the soul with the ability to serve greatly and the monad is contacted for the first time.

Its influence is that of spiritual will, This law is connected with the basic urge of Desire, the urgency towards satisfaction whether it is for the not-self or Self.

Desire of the lower nature keeps one trapped on the wheel of rebirth and it was both the Buddha's and Christ's teachings to be detached by desiring the good of one's neighbors and to lead the self centered desire nature of the heart onto higher levels and eventually onto the path of enlightenment/soul expression. When a human being progresses as an aspirant onto the path of discipleship then this Law begins to function in one's life, unconsciously at first. As the disciple's mind comes to appreciate and understand the Law of Repulse in relation to the opposites of not-self and Self, illusion and reality, the disciple approaches the portal of initiation and eventually gains freedom from the Great Illusion and release from the phenomenal world. The motive to serve and love, for the light which is within and around the disciple and others quickens the Law into action. This law tests a disciple's determination.

What does it mean to serve one's brother and obey the soul? Until there is the right motive of the heart to serve, this question will evoke little response. Where does this right motive come from? From contact with the soul. The soul's nature is love, light and the urge to serve the Great Plan. It is not obedience to Masters that this law and the law of service point, but obedience to the Light of all in all. This one concept of Repulse brings understanding that advancement of universal fellowship is not possible without repulse, for it is known how Community or Fellowship (names for enlightened group or hierarchical activity) can accelerate the evolution of a planet.

In the words of the Master Morya: "The community, being a fellowship first of all, sets as a condition for entrance two conscious decisions: labor without limit and acceptance of tasks without rejection."<sup>59</sup> If the will is there to proceed in cooperation with the Law of Repulse, the power of love to repulse will be evoked from which flows the power to labor without limit and accept the full chalice.

\* \* \*

## **26      LAW OF ELEVATION OR GROUP PROGRESS**

### **FIFTH LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

This is the fifth Law of Soul Life. This law begins to function and to be registered in the personal consciousness when the members of the the group achieve certain definite realizations, and knows certain ideals as facts in experience such as non-sentimental consciously embraced brotherhood, harmlessness and discrimination. The symbol for this law is the mountain and the goat standing at the summit with the astrological sign of Capricorn.

All hard places can be surmounted and the summit reached by the Divine Goat - a symbol meaning group effort. It is a subsidiary law of the Law of Magnetic Impulse and is connected to the energy love petals of the egoic lotus. Disciplined progressive effort through love and selflessness is the key. It would be well to grasp the fact of a universal brotherhood with clarity. This principle and its realization within the consciousness of the group members begins to be experienced when loving living is demonstrating conscious self-sacrifice. and when the group members are beginning to function as souls.

The incoming new discipleship groups are primarily an experiment in group activity, and are not formed for the purpose of perfecting the individual member in any group. This is a fundamental and essential statement, if the objectives are rightly to be understood. In these groups the members supplement and fortify each other, and, in the aggregate of their qualities and capacities, they should eventually provide groups capable of useful spiritual

expression, and through which spiritual energy can flow, unimpeded, for the helping of humanity. The work to be done is very largely upon mental levels with practice developing the faculty of discrimination of a subtler nature.

The spheres of daily service of the individual members of the new groups remain as their destiny and soul urge indicates upon the physical plane; but—to the differing fields of individual effort — there will be added (and this is the point of importance) a group activity which will be a joint and united service. "Each person in such groups has to learn to work in a close mental and spiritual cooperation with all the others, and this takes time, given the present point of evolutionary development of the world aspirants. Each has to pour forth love on all, and this is not easy. Each has to learn to subordinate his own personality ideas and his personal growth to the group requirements, for at present some will have to hasten their progress in certain directions, and some must slow it down as a service to the others. This process will take place automatically as the group identity and integration becomes the dominant thought in the group consciousness, and the desire for personal growth, spiritual satisfaction and contact with the Master is relegated to a secondary place."<sup>60</sup>

This is decentralization in which nothing is asked for the separated self. Understanding this law of soul life brings clarification as to the relationship between a soul's purpose and group work in the new era. To the individual within a discipleship group is added the energy of group activity which flows into his/her unique soul purpose of service in the world. Discrimination is also an important realization for individuals in discipleship groups.

"Not the discriminating process that has to do with the choice between recognized evil (so-called) and recognized good, but the more subtle pairs of opposites such as right and wrong speech, right understanding and right indifference."<sup>61</sup> Though the soul knows itself to be one with all souls, the intuitional faculty of the soul can discriminate the subtle differences in vibration of the Master, groups, other people, his/her own soul and his/her own vital, emotional and mental bodies. "Learn to discriminate"<sup>62</sup> is the injunction. It is through obedience to this law that preparation for initiation is instituted by the disciple to the point of sacrificing that realized self so that divine purpose and will may be consummated, and the divine life and glory shine forth in perfect radiance. Individual and group progress is always the result of self-imposed discipline. "All should grasp the self-initiated necessity of initiation. Sacrifice, Service, Magnetism—I, if I be lifted up, will draw all men unto me."<sup>63</sup> Group Progress and Divine Repulsion, these are but the inadequate terms whereby we seek to express the divine truth that the whole life and expression of the solar Logos will only be possible, and His purpose only be revealed, when He has brought each atomic unit to the stage of self-realization.

It is this law that is bringing into activity the formation of world groups aligned with soul purpose and the Plan, being governed by soul laws which will raise humanity still more rapidly and why this law is called that of Elevation. Such is the larger reason for the laws of soul life. For this type of group activity to succeed we must all learn to think of each other as souls and not as separate personalities. Groups governed by this law will be characterized by group

unity through loving living service, group meditation through intelligent activity and loving contemplation, and group activity through a specific form of service. Groups with many purposes are destined to form in the new era with one goal: that of establishing the Kingdom of God on Earth. In the new era, ray Temples, Universalis Infinitum: a university of Light, preparatory and advanced Schools of meditation and conservatories of the Initiates will manifest to facilitate the unfolding Plan.

A pouring into the planet of new astrological energies began in the previous century in 1935 and cyclically since then, every seven years, to augment the Law of Group Progress. This happens for one week between December 21st and 28th and during that time it is strongly advised that the work of the groups and the Group of World Servers take advantage of such energetic impacts. It is of interest to note that the next (13th cycle) of Group Impact is planned to occur in 2026 and will be a great opportunity to anchor the light of higher realms for the betterment of humanity. Such interplay between the kingdom of human souls and extra-planetary forces will take on greater significance in the coming era.

\* \* \*

## **27      LAW OF EXPANSIVE RESPONSE**

### **SIXTH LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

The Sixth Law of Soul Life has several facets. It is a law dealing with the gradual evolutionary expansion of the consciousness indwelling every form and thus deals with response to environment and opportunity. Indirectly it is the cause behind the spheroidal shape of life forms in the solar system. This is expressed through two types of soul force - rotary and spiral-cyclic which generates an internal activity which in turn produces a sphere. This law deals with the relation between atoms (matter) and the great phenomenon Light, which in its aggregated phenomena, forms that composite sphere, a solar system. All atoms are spheres of whirling atomic matter. Energy, Light and Matter are related.

Its symbol is the flaming rosy sun with a sign in the center, a sign symbolizing the union of fire and water. Below this sign is found a hieroglyphic which may not be given yet as it gives the clue to the Earth sign and the keynote of the planet or physical body of the Planetary Logos.

The Ray energy is the expansive energy of the 3rd Ray, the adapting factor of active intelligence. Through this law and its 3rd ray force, is a connection to Patanjali's sixth arm of yoga: Attention and Correct Orientation. A close study of this relationship can bring illumination of conscious being.

Laws six and seven of soul life deals primarily with the working out of Divine purpose as a result of group activity on the astral and mental planes and the corresponding vehicles of the group units. Its fuller interpretation requires more souls preparing to take the third initiation and who have taken it.

This law and law seven become operative in units on the physical plane (and in the future, the etheric physical plane) which are becoming responsive consciously to those group workers who are discarnate. The sixth law works out through higher manas or the higher spiritual mind and telepathic Fifth Kingdom influences via the knowledge petals of the egoic lotus and the Law of Service.

From the Tibetan Teacher DK: "We can now, with great brevity, however, touch upon the sixth law and the seventh laws [of soul life], for we will speak of them together. The other five laws [of soul life] have worked out into a definite activity upon the physical plane. The effect or consequences of the impulses behind them produce the working out of the purpose of the Most High, and can be recognised upon the plane of phenomena. They can all be so recognised, but at this time, the conscious awareness of humanity is such that only in five instances can the effect of these laws be noted, and then only by the most advanced of the world aspirants. The disciple and the initiate can dimly begin to recognize the effect of the sixth and the seventh laws, but no one else at this time. These two laws are not capable of interpretation as mentioned because only those who are initiated or in preparation for initiation can begin to understand them. The enlightenment which is the result of initiation is necessary before one can touch the idea behind these expressions of purpose. We shall not, therefore, take any time dealing with The Law of Expansive Response, or with The Law of the Lower Four, beyond giving two ancient stanzas which will convey much to the initiate but may only be sounding words and meaningless symbolic phrases to the average reader and student."<sup>64</sup> Understanding the last two laws of soul life

will come with experience and initiate consciousness.

Stanza for Soul Law 6: *"The Sun, in all its glory, has arisen and cast its beams athwart the Eastern sky. The union of the pairs of opposites produce, in the cycles of the time and space, both clouds and mists. These veil a mighty conflagration....The flood pours forth. The ark floats free...the flames devour. The three stand free; and then again the mists envelop. Above the clouds of earth, a sign shines forth....Only the eye of vision sees this sign. Only the heart at peace can hear the thunder of the Voice which issues from the dark depths of the cloud. Only an understanding of the law which elevates and lifts can teach the man of fire and son of water to enter into mist. From thence he climbs on to the mountain top and there again stands free. The triple freedom thus achieved has naught to do with earth, or water, or with fire. It is a freedom, triple in its kind, which greets the man who passes freely from the sphere of earth into the ocean of the watery sphere, and thence on to the burning ground of sacrifice. The sun augments the fire; it dissipates the mist and dries the earth. And thus the work is done."* -Bailey, Alice A., Esoteric Psychology II, p.199-200

In sensitive awareness lies the secret of progress to the many states of consciousness. Bear in mind that as expansive response is proceeding, a parallel activity is occurring in material substance. Up until the fourth initiation, the soul is a center of consciousness, the bodies, a center of experience and the environment, a place of purification and the field of planned service. Aspirants and disciples advance most quickly who meet the need with resourcefulness, love and alacrity. Further interpretation of soul law six and seven shall be given when a degree of enlightenment which only the intuition can provide is attained.

## 28 **LAW OF THE LOWER FOUR OR ETHERIC UNION**

### **SEVENTH LAW OF SOUL LIFE OR GROUP CONSCIOUSNESS**

This is the Seventh Law of Soul life which is connected with the 5th ray force [Mind, Knowledge] and the seventh arm of Yoga: Meditation and Right Use of Mind. This law is also known as the law of etheric union, and its symbol is a male and female form, placed back to back. The male figure is holding above his head a shield or tray of silver, a great reflector, while the female form holds aloft an urn full of oil. Below this sign is another hieroglyphic which contains the secret of the astral plane, which has to be dominated by the mental. The ray energy is fiery energy of the 5th ray, the vitalizing factor. This Law is also connected with meditation. "One of the objectives of the daily meditation is to enable the brain and mind to *synchronize*, vibrate in unison with the soul as the soul seeks in meditation deep to communicate with its reflection."<sup>65</sup> Beyond giving the ancient stanza for this law which will convey much to the initiate, it may only be sounding words and meaningless symbolic phrases to the average reader and student." The teaching on meditation to synchronize, closely connects this law with the Laws of Rhythm and Vibration.

Stanza for the Seventh Law of Soul Life:

*"Four sons of God went forth. But only one returned. Four Saviors merged themselves in two, and then the two became the One."* These two ancient writings, stanza 6 for the 6th Law of Soul Life and stanza 7 above — one mystical and the other occult—convey but little to most minds, and this we can easily see. Therefore it does not profit us to consider

them too carefully. The time is not yet. These are given us, because they contain a magnetic potency which will aid in stimulating comprehension."<sup>66</sup>

Little else available in writing on this law. Using the Law of Analogy, the author hopes to stimulate thinking. Earth, Air, Fire and Water are the four terms needed to account for matter and manifestation. "The ancients did not think that matter was actually made up of the physical realities fire, earth, air and water. They used these four commonplace phenomena to describe the functional roles of the four terms necessary for manifestation."<sup>67</sup> Fire is the active mental coagulating principle, earth is the physical receptive, formative principle, air is the etheric subtle mediating principle and water is the astral principle of sentiency. An analogy can be made to the issuing forth of the four vibrations (Saviors) of divine manifestation: the physical-etheric-astral-mental, with buddhic being intermediary to the three higher planes of divine manifestation. The elements also are representative of deva substance that is feminine to the human hierarchy. Macro and microcosmically, the four lower vibrations represent the cross of matter, upon which the universal Christ principle, the oversoul/soul, is sacrificed for manifestation that the divine seed of God consciousness within the soul may flower. The "four become the two, the two become One" has a reference to the soul and personality coming together to merge as one. This translates into an outpouring of love from the mental plane, clearing the astral plane of its poisonous phenomena created by humanity and restoring it to its pristine state. This law may also refer to soul development paving the way for the human and deva evolutions to eventually blend. The laws of soul life are principles upon which a stable culture and civilization of spiritual values will be built.

## 29 **LAW OF RECOGNITION**

This law that the Tibetan Master DK has given means in simple words becoming able to RECOGNIZE (note the capitalization) the state of consciousness of those who are on the Path — our companions and Those who serve. This Law, DK states, begins to function only at a certain stage of the Path, as it is based on a capacity inherent in the life of the soul. Therefore, the more the shift of identity to the soul, the easier it will be to recognize the light of those around us. At the same time, we can say (according to the practice of "acting as if") that the more we are committed to recognize the light—looking for it, waiting for it, believing in it—the more we will become living souls. The "as if" technique (see Bailey, Alice A., *Discipleship in the New Age II*, p. 554-555). acts as if one already possesses the desired inner state. It facilitates identifying with the true and genuine self.

The Law of Recognition deals with the nature of divinity that is latent within the conscious entity to be contacted and unfolded. "We see what we are ourselves; we become aware of that in other forms which is developed in ourselves. We fail to see aspects of life because as yet in ourselves, those aspects are undeveloped and latent. To illustrate: we fail to see the divine in our brother because as yet the divine in ourselves is un-contacted and unknown; the form aspect and its limitations are developed in us and the soul is so hidden that we only become aware of the form of our brother, and fail to see the soul. The moment we contact our own soul and live by its light we see the soul of our brother, become aware of our brother's light, changing our entire approach.

Herein lies the clue to our limitations. Herein lies the promise of our success. Latent faculty, when developed, will reveal a new world. The hidden powers of the soul brought to full expression will make us aware of a new world and reveal to us a scheme of life and a kingdom of being hitherto unrecognized, because not seen. Hence the need for every investigator of the mysteries of existence to bring to the search one's full equipment, and hence the necessity therefore for this process of soul unfoldment to be carried forward and potential faculties to be developed if the truth in its fullness is ever to be realized."<sup>68</sup> Recognition may be interchanged with the word 'sensitivity'.

It is useful to remember that every Elder of the spiritual Hierarchy has also passed through the same stages of the human experience. Spiritual progress is blind to who or what is evolving on the path to unfolding, embodying and expressing the seed of divinity within every form. The Members of the Spiritual Hierarchy are true exemplars of humanity's destiny and aspirations and this fact alone provides hope, assurance and inspiration on one's journey into soul consciousness and group service.

What is needed now at this time of aspirants and disciples on the Path is a sensitivity to and contribution to the 'coming closer' of Those Who can deeply influence the birth of a new civilization. This can be accomplished by firmly trusting the new era of the soul is imminent, by being mindful of it in the here and now, being watchful at every moment for people who radiate the light of divinity.

## 30 **LAW OF ANALOGY OR CORRESPONDENCES**

This law is gaining prominence.. The Tibetan Master DK in the books of Alice Bailey explains how it serves to direct the understanding of this law as the interpretive law of the system, which is love and explains God to man by stating: "All souls are identical with the Oversoul; The Logos of the solar system is the Macrocosm and Man is the Microcosm; Soul is an aspect of every form of life from a Logos to an atom; this relationship between all souls and the Oversoul constitutes the basis for the scientific belief in Brotherhood; Brotherhood is a fact in nature, not an ideal; Just as God is the Macrocosm for all the kingdoms in Nature, so man is the Macrocosm for all the sub-human kingdoms; The goal for the evolution of the atom is self-consciousness as exemplified in the human kingdom; The goal for the evolution of man is group consciousness, as exemplified by a planetary Logos; The goal for the planetary Logos is God consciousness, as exemplified by the solar Logos; The solar Logos is the sum-total of all the states of consciousness within the solar system."-Bailey, Alice A., Treatise of Cosmic Fire, p.7

In Analogy there is resemblance but not in detail. In Correspondence there is practically identical expression in detail, usually on a lower level. These two points must be clear. There is an analogy between a system, planet, man and an atom. A man, when occupied in creation of any kind, and in the process of producing forms on earth which embody an idea is working as a Logos. This is a perfect example of analogy. In Correspondence, the senses serve as an example: The physical sense of hearing has its psychic correspondence in Clairaudience...This leads eventually to mental telepathy and finally to spiritual knowledge in the

higher correspondence. Sight leads to Clairvoyance...This leads eventually to spiritual vision and finally to spiritual identification. Touch leads to Sensitivity...This leads eventually to spiritual aspiration, to recognition and finally to spiritual impressibility. Another correspondence is the etheric heart center of a human being corresponding to the physical sun.

The purpose of this law is to lead the mind back toward enlightenment. The thoughts and images we hold in our conscious and subconscious minds will manifest their mirror likenesses in our external circumstances. Our outer world is a mirror of our inner world. Earth is a school for practicing these laws that govern the evolution of consciousness. There is a Correspondence between principle and manifestation on the various planes of Being and Life. The three Great Planes in the order of manifestation are, The Great Spiritual Plane; The Great Mental Plane; The Great Physical Plane, or the Great Trinity or Triune (the three in one). All descending planes are in correspondence with one of the Great Planes.

Correspondence enables that which is normally unknowable, to become known to the individual who learns and knows how to use this principle. Some use it in a conscious and deliberate manner while others may not even be aware that they are using this principle. When used knowingly, it will enhance the clarity of vision and enables the mind to penetrate the most secret of secrets, and can shed light on many a dark paradox. Correspondence reveals the innate interconnectedness of all things in the universe. This was known to the adepts and masters of ancient Egypt as the substance of the ethereal, the spirit substance or etheric web that pervades and interpenetrates the universe. This substance acts as a medium for the transmission of light, heat, electricity, gravity. It is non-material in nature. Also

known as the un-created substance, or universal substance. The substance in which all suns, worlds, and galaxies are suspended in space, time, and change. All of us are intimately connected to all events, and to each other, whether or not it is realized. The ethers are where spirit substance is manifesting the beginning of matter. Science refers to this substance as "dark matter" that cannot be seen, touched, smelled, or weighed. Dark matter does not absorb or reflect light and is therefore invisible. It is considered to be a non material substance. It was first discovered on Earth while doing research with the Hubble space telescope.

In the symbolique method of teaching which will gain prominence in the new era, the Law of Analogy will take on greater significance as the Ray of Harmony becomes increasingly active. This law would not be possible if the universe were not one ordered inter-related whole. Analogy is a principle closely connected with Law of Universal Harmonics. The geometric symbol of man the microcosm, the five pointed star corresponds to the five pointed star used by the spiritual Hierarchy at the Wesak festival. Philosophical geometricians refer to 'Analogy' as a general law ; "You will know, as far as it is allowed to a mortal, that Nature is from all points of view similar to itself."<sup>69</sup> The concept of correspondence or analogy between macrocosm and microcosm, central to Hermetic philosophy is encapsulated in the sentence from the Emerald Tablets: "*THAT WHICH IS BELOW IS AS THAT ABOVE,*" All parts of a design, be it a work of art, the solar system or the Plan of God, when related to each other and the whole through unity and beauty are expressions of law.

Divine creative design imparts a vitality to form enabling it to attract and penetrate the mind-field and etheric fields of living beings. Phi, known as the 'golden' proportion embodies the great principle of harmony. Its ability to relate every element of a design via the analogy of proportion is the basis of the statement that the Logos of the solar system is the Macrocosm and man is the macrocosm in microcosmic form. In this view the human organism in its form, function and essence represents the ordering principles of the entire universe.

"The phi proportion not only has cosmological application but embodies the formula for analogical thought - the law of correspondences and is therefore at the foundation of symbolism itself."<sup>70</sup>The phi proportion is found in the nautilus shell (see page 135). No analogy is ever exact in detail but only in certain broad basic correspondences. There will be found unchangeable points of resemblance. In viewing creation, no two details are exact but they are similar. The practical aspect allows for a mental understanding of the nature of those things beyond normal understanding.

By understanding the creative aspect of Logoic Mind, one can understand the creative aspect of human mind. For example, the anthropocosmic architecture -ancient temples based on the principle a human being is in essence the embodiment of the Universe incarnated in a form called human which has an evolving soul. Some researchers who came to such temples in the past discovered the law of analogy and learned how to read the symbolic language of the architecture, discovering much wisdom spiritually. In the new era, Architecture and the Arts will again employ the symbolic language of Analogy in concert with the Light.

The Law of Analogy is a guide to the comprehension of the universe and leads to the knowledge of correspondences. By understanding human processes one comes to understand universal processes and vice versa. Analogy is considered a law because all manifestation in the cosmos follows universal principles and laws. Whether in the spiritual plane or in the material plane, the same principles apply.

\* \* \*

God's great design in all His works is the  
manifestation of His own glory.

C.H. SPURGEON

"What marks those portions which you thus describe as separated from another part? Do not all form but one completed ladder of clearly marked proportions"

Initiation, Humana and Solar,  
Alice A. Bailey, p. 210

## 31 **LAW OF UNITY**

The Law of Unity is that Law which recognizes no separation. It ignores the appearance of separateness in the apparent divisions of polarities, gender, cause and effects, the part and the whole, the one and the many. In this realization each is an integrated part of the total picture. It is with this law that evolutionary process is identified. The Law of Unity sees neither night nor day, but the night-day process; neither right or wrong, but the right-wrong process; neither the pleasure nor the pain, but the pleasure-pain process; neither the one nor the all, but the at-one-ment process of the One Life, whose cells and souls work together even in the seemingness of division and acknowledges such division, but stresses the oneness of the parts. The Law of Unity sees loss and gain, life and death as nothing but Reality experiencing itself through the evolution of consciousness.

We are all connected, all bearing the seed of Divinity. This is the way we start, and the way we develop into eternity. It is only while in third dimensional physical form and because of the greater separation of the higher self from the personality, that the experience of being alone, an illusion in the thinking of a human being occurs. As a result, fear enters the emotional body because of this illusion and begins to eat away more profoundly a human soul's connection to Source. But, as soul growth is experienced, in some small but profound manner, all benefit as a result of this law.

It is this law which creates group unity and adapts form to life. Form follows consciousness and the soul is a unit of light and consciousness, coloured by particular Ray qualities.

The totality of all souls constitutes the One Life.

The human soul is the self-conscious aspect of the soul brought to fruition in the phenomenal appearance of a human being. The group-conscious aspect or soul retains the human state of consciousness, but adds to the human unit awareness of its ray vibration, progressively unfolded; its awareness then is the true nature of love, of quality, of spirit in its relationships; it is God-conscious only in potential, and in that unfoldment lies, for the soul, its own growth upward and outward after its self-conscious aspect is perfected and its group-awareness is recognised.

The soul therefore expresses three points or appearances: God Consciousness or Unity, Soul or Group Consciousness and Personality or self-consciousness. In working with vibration and polarity it must be recognized that in the evolution of consciousness, one deals with duality and that the highest unity is achieved when the dual relation is perfected, when the One Life is no longer a theory but is known, provided there is growth and intelligent application of truth.

The knowing or knowledge of Oneness and of Unity is a matter of shifting the focus of attention progressively out of one form into another, and thus, from a higher standpoint getting a fresh glimpse of a possible truth. Through human history, each age (and the present is no exception) has believed its grasp of Reality and its sensitivity to the inner Beauty to be greater and nearer the True than was ever previously possible. In this solar system, the highest realization attainable is what is termed God Consciousness—the One Life—an awareness (of the initiate of high degree of this planet) of the embodied Logos, of Deity,

and identification with the consciousness of that stupendous Creator, Who is seeking expression through the medium of the solar system. There are Unities and Syntheses that are a mystery even to the Logoi of planets and solar systems, but Who give help when the evocative appeal of any planet is adequate. All is one, and all that appears to be separate will, in the end, is nothing but an illusion to those who follow the path of separateness. To those for whom the universe is one totality, recognize its Synthesis and acknowledge division then such beings may move unimpeded in the universal harmony. Such is a glimpse into this great law.

\* \* \*

## **32 LAW OF VIBRATION**

The Law of Vibration, in addition to the Law of Love is one of the seven laws of our solar system, under the three major cosmic laws (Law of Economy-Law of Attraction-Law of Synthesis). Cosmic Laws apply to the evolution of solar systems.

Vibration is the basis of manifestation, starting on the first or highest plane of spirit, beginning with the work of the Logos. This is the atomic law of the system, in the sense that on each of the system's seven planes, the Logoic is the atomic plane. Nothing rests; everything moves; everything vibrates. This is the law of progress, of movement and of rotation. This Principle explains that the differences between manifestations of the One substance into spirit, matter, energy and mind, result largely from varying rates in vibration. All that exists, is in constant vibration and motion. Atoms always vibrate with such great rapidity that they seem motionless to the physical eye. At the other end of the scale are things that vibrate so slowly that they also appear to be motionless or non-existent. In between are the various vibrations of living entities which range in consciousness all the way down to the lowly dust particle that plays an important role in the food chain. Still there are things even lower than dust. If we were to follow the scale of life all the way down to the utmost regions of the negative pole (undifferentiated matter), we again would find ourselves in the realm of spirit - the Alpha, and the Omega. All that is, begins in spirit and ends in spirit on a higher turn of the spiral completing a single cycle of evolution that will be repeated countless numbers of times through eternity.

The Law of Vibration states that any vibration which is sent out for good, for service, increases into higher frequencies as it moves through space, until it returns to its origin, bringing the gifts of those higher frequencies. That which draws on vibration for selfish purposes of lust, power and greed, drawing these forces into itself, receives vibrations that decrease in frequency level and the energy level drops. As that occurs, the being needs another “fix” of incoming vibration and energy, then another, and another, as though one were addicted. Like attracts like when it comes to thought manifestation and by raising or lowering the degree or vibration whether physical or mental, polarities such as heat-cold, hate-love, fear-courage are transmutable. Vibration and polarity are closely connected.

The magnetic energy of divine love provides the power to attract and build, while radiatory energy of the soul or divine love increases the vibratory rate. Beings that radiate good energies increase into higher frequencies and bring back good. Beings that send forth selfish energies bring back to the sender, as magnets, the lower vibrational forces. The sun of our solar system is an example of both magnetic and radiatory energy governed by the Law of Attraction and qualified by the impulse of the second Ray of Love-Wisdom. It is this law along with the law of universal harmonics that will come into play in the Aquarian cycle which allows for the work of the white magician, one who brings together spirit and matter for the benefit of all evolving life or vibration. The white magician works with energies to manipulate matter in furthering planetary Logoic purpose.

Everything in the universe is primed to function at a particular frequency. The Hemeticists teach that Spirit is at one end of the pole of vibration and the other end of the pole being extremely gross forms of Matter. Between these two

poles are millions and millions of different rates and forms of vibration. So it is with Light, Heat, Magnetism and Electricity — forms of vibratory motion connected to the universal ether, a higher manifestation of that which is called matter, postulated by Science but its nature not yet understood. The universal ether is a substance of extreme tenuity and elasticity which is the connecting link between the forms of vibratory energy known as "Matter" and "Energy" and that it also manifests a degree of vibration, in rate and mode, entirely its own.

Only by means of transformation and the raising of vibrations is it possible for human beings to attune to the higher frequencies of subtle realms of existence. Everything vibrationally is born anew. Physical, emotional, mental and spiritual purification are all means that enhance vibrational resonance with the inner planes and cosmic energies. The beauty of the natural world is a powerful vibration to immerse oneself in. Love is a powerful vibration. Both Beauty and Love carve an inner pathway to the sacred and divine. To enter the flow of evolution requires perceptions and disciplines that serve to raise vibrational frequency. The Planetary Logos is entering a field of higher vibrations, a process affecting the consciousness of all kingdoms comprising its life.

This law concerns mainly the form and soul side of life. It produces that evolutionary unfoldment of the human being as a person and also of the human being as the soul. When this law is intelligently grasped, the mind of a human being will recognize the power of vibration and arrive at real self knowledge.

## **33      LAW OF RHYTHM**

This is a law which deals with the the health and development of the aspirant and disciple on mental, emotional and physical levels. Training in the new era for aspirants and disciples will be cyclic and have its ebb and flow as all else in nature. In understanding the law of cycles, knowledge is gained of the evolutionary process and a realization of the rhythmic work of creation. Rhythm, ebb and flow, and the measured beat of the pulsating life are ever the flux of the universe. In learning to respond to vibration of high influences, rhythmic periodicity must be borne in mind.

To be able to consciously express the Divine order, living in rhythm with the flow of universal life is needed. By adapting to this law the divine order expresses in one's life. But unless it is accepted and worked out from within, the Divine will be unable to unfold harmoniously through humanity. When human living is not adapted to this law, regulation comes through Saturn, the karmic disciplinarian and in tougher cases through Pluto, the destroyer of obstacles to the Will of Deity. Likewise, the Master can only come into one's life when there is achieved a certain order of living and acceptance. Wisdom informs us how to live in rhythm and how to playfully live according to the law.

Humanity is free to adapt to the law or not, but Saturn brings in the consequences of one's deeds. If a person eats something which is not suitable, it causes indigestion and pain and thus will learn earlier or later. Plutonian force works more intensely than Saturnian, through crises and conflicts to teach the wisdom of this law.

For example, without adapting to the Law of Rhythm, the experience of suffering continues as long as the soul remains under control of form. There is a natural tendency of form to keep a hold on material things and not know when to let go. Through the Laws of Love and Sacrifice, slowly the personality liberates itself from the grip of its self made prison. Humanity must learn to give as Nature gives freely to all, otherwise non-conformance brings in the law of Rhythm to act through the energies of Saturn and Pluto.

Everything flows, out and in; everything has its' tides; all things rise and fall; the pendulum-swing manifests in everything; the measure of the swing to the right is the measure of the swing to the left; rhythm compensates. This principle, on the Physical Plane, is the most visible of all principles and its power is observed within the forces of nature which move the waves and tides of our oceans and the continuous changes of the seasons. It is observed in the continuous cycles of life, death, and the rebirth of all things, a rise and fall of governments and nations, a constant creation and destruction of suns, worlds, and galaxies.

In terms of energy it is observed in the behavior of the electricity, light, and heat as it vibrates between higher and lower octaves. Rhythm on the mental plane is experienced as the wide mood swings displayed in human nature in thinking. It can be experienced as extreme happiness, and then swing to extreme sadness - from a gentle behavior to an extremely violent behavior at the blink of an eye. Rhythm is the law of karmic compensation and maintains the equilibrium in all things. It returns to us what we measure out in life.

The return swing of the pendulum is assured without fail and there is no escape from the effects of this immutable law. This law holds us true to what we believe, or not believe, and compensates us accordingly. All of nature follows this law. Rhythm perpetuates the phenomenon of time.

We will fulfill the Law of Rhythm one way or another. Either use the law to our advantage, or become its subject. The door of universal law swings in all directions. The final result depends what we have chosen to believe and whether or not our belief system allows us to see the truth as it really is. If a person does not want to know or care, then such a person will evolve through the slow process of evolution. Nothing in the universe can, or is allowed to stand still. All manifestation is the result of active energy producing certain results, and expenditure of energy in any one direction will evoke an equal expenditure in an opposite direction. Synchronizing the laws of vibration and rhythm, the Tibetan Dk says will take place when more of humanity enters the silence of the high places.

Humanity has not followed the basic Law of Rhythm, which governs all the processes of nature, and humanity is a part of nature. As soul attunement grows, "humanity will find itself entering into the silent places where the Masters of the Wisdom dwell, and will work in group rhythm with Them, obeying thus the laws of the spiritual realm, which are the subjective laws of God." -Bailey, Alice A., Glamour p. 48

## **34      LAW OF LOVING UNDERSTANDING**

This is the law for the next unfolding of the root race. A root race is one of successive stages of evolution that the human kingdom passes through to develop its latent capacities. The focus of the previous or Fourth root race, which unfolded on the ancient continent of Atlantis, was development of the sentient body—the astral or feeling nature. The objective of the current or Fifth root race is the development and right use of the mind. The next unfoldment will be development of the intuition and control by the soul of its vehicle of expression, the personality. Each root race has seven sub-races, the current being the Fifth sub-race of the Fifth root race in which mental development was the objective. With the sense of the soul and loving understanding developing in a portion of humanity, the sixth sub-race is beginning to unfold paving the way for the Sixth root race in which intuitional development will be the objective.

This is a law for which present day language is inadequate to express its functional effect. Of this, the Master DK says: "This is a quite inadequate and sentimental phrase [the Law of Loving Understanding] for a scientific expression of a great coming evolutionary development in the human consciousness. But, until that development is an accomplished fact, we have no means whereby to express the true significance of the underlying idea."<sup>71</sup>

This law will lead to a recognition of God or Divinity as undeniable truth, to humanity realizing itself as an expression of the Divine and the fact of humanity as a key player in the role of planetary mediator between the human

and super human kingdom of enlightened souls.

By being consciously connected with the higher planes of consciousness upon which the Ashrams of the Masters reside, loving understanding enters as a functional quality that becomes present in group life. When the focus is on human cooperation with the spiritual Hierarchy through loving understanding, co-creation and co-authorship is possible. Loving understanding is a divine principle that will transform consciousness through synthetic realization, identification and participation, words which will become clearer as human and soul consciousness blends. The purpose of this law is to bring ideas and impulses of divine origin into the awareness of the human race. For now, the Tibetan Master DK can find no better words to express adequately its highly scientific nature and functional effects than the words: Loving Understanding.

## 35 **LAW OF ASSEMBLY**

This is a law which governs those great procedures which are responsible for the bringing in of extra-planetary energies as the redemption of worlds and form is carried forward by the planetary Logoi under the great Second divine ray—Love-Wisdom. It is a higher plane law which at present operates only in the Council Chamber of Shamballa and unless one is a member of the Spiritual Hierarchy, the process is beyond the capacity of the human mind to comprehend. It is a law that will be synchronized with the Law of Loving Understanding.

The Tibetan Teacher DK states that Shamballa, the center of Divine Will on a higher vibratory plane of the earth, is a focal point for energies which are assembled and brought together by the planetary Logos in order to create a manifestation adequate to His unfolding intention and planetary service. "Within the confines of Shamballa,"<sup>72</sup> this requires a process through highly developed, wills of pure reason, of elimination and substitution under the Law of Assembly, so that the earth system steadily evolves into greater expressions of sacred unity.

A reflection of this process takes place under law in the closing of an age, during the transition to a new one. An example of this are the egalitarian assemblies and intergovernmental organizations that the New Group of World Servers helped establish in order to foster a common will and debate the common good through communication in the public sphere. Through an analogous 'assembly' process, though on a lower level, new forms of thinking that better

serve the public good slowly replace those that have served their evolutionary purpose. On a much higher level—the Law of Assembly produces the Science of Energy which is the redemptive process influencing the work of those who labour in the higher, subtler spheres of planetary life such as Shamballa. The assemblage of those new and more correct ideas must inevitably be substituted for the old. This is an ongoing process. More will be revealed about the Law of Assembly in the new era as human cooperation with the inner government of the planet, the spiritual Hierarchy and Council Chamber of Sanat Kumara in Shamballa develops. It has been previewed now so that aspirants and disciples can begin to grasp the potential scope of perspective, breadth of scale and depth of dimensionality, plus the cosmic energies with which humanity and the spiritual Hierarchy will work.

An old cycle of evolution for humanity is ending and a new one is beginning. The new into which earth is moving will provide the conditions for humanity to attain a higher degree of spiritual awareness. The next step for humanity leaves behind thinking about divinity and will move into embodying it—a great difference. The new course for humanity of the Soul is set to develop the force of love, the love of truth and power of the will. "The workings of spiritual laws will impress humanity to accept responsibility. The Law of One will take precedence over all established human law, binding together all who serve the common good and seek justice and peace on Earth."<sup>73</sup> The laws of this solar system are expressions of God's quality and character. God's Plan is working out stage by stage under law—law in action and realized in consciousness, steadily revealing the nature of God.

## End Notes

An end note with a 'day month year' indicates the date of a Letter to members of a group experiment under higher guidance.
